The Behaviour and Design of Steel Structures to EC3 N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2017-12-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the forth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process The Behaviour and Design of Steel Structures to EC3 is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries

design for students pursuing careers in engineering and construction Presented in an easy to read student friendly style the 6th Edition conforms to the latest specifications of the American Institute of Steel Construction AISC and AISC Steel Construction Manual While the material is prepared for an introductory junior or senior course the last several chapters may be used for a graduate class The material is best suited to students with a basic understanding of the mechanics of materials and structural analysis

Reliability of Structures, Second Edition Andrzej S. Nowak, Kevin R. Collins, 2012-12-20

Reliability of Structures enables both students and practising engineers to appreciate how to value and handle reliability as an important dimension of structural design It discusses the concepts of limit states and limit state functions and presents methodologies for calculating reliability indices and calibrating partial safety factors It also supplies information on the probability distributions and parameters used to characterize both applied loads and member resistances This revised and extended second edition contains more discussions of US and international codes and the issues underlying their development There is significant revision and expansion of the discussion on Monte Carlo simulation along with more examples The book serves as a textbook for a one semester course for advanced undergraduates or graduate students or as a reference and guide to consulting structural engineers Its emphasis is on the practical applications of structural reliability theory rather than the theory itself Consequently probability theory is treated as a tool and enough is given to show the novice reader how to calculate reliability Some background in structural engineering and structural mechanics is assumed A solutions manual is available upon qualifying course adoption

Cost Optimization of Structures Hojjat Adeli, Kamal C Sarma, 2006-11-02 While the weight of a structure constitutes a significant part of the cost a minimum weight design is not necessarily the minimum cost design Little attention in structural optimization has been paid to the cost optimization problem particularly of realistic three dimensional structures Cost optimization is becoming a priority in all civil engineering projects and the concept of Life Cycle Costing is penetrating design manufacturing and construction organizations In this groundbreaking book the authors present novel computational models for cost optimization of large scale realistic structures subjected to the actual constraints of commonly used design codes As the first book on the subject this book Contains detailed step by step algorithms Focuses on novel computing techniques such as genetic algorithms fuzzy logic and parallel computing Covers both Allowable Stress Design ASD and Load and Resistance Factor Design LRFD codes Includes realistic design examples covering large scale high rise building structures Presents computational models that enable substantial cost savings in the design of structures Fully automated structural design and cost optimization is where large scale design technology is heading thus Cost Optimization of Structures Fuzzy Logic Genetic Algorithms and Parallel Computing will be of great interest to civil and structural engineers mechanical engineers structural design software developers and architectural engineers involved in the design of structures and life cycle cost optimisation It is also a pioneering text for graduate students and researchers working in building design and structural optimization
