#### Introduction

#### Instructor

My name is John Steely, and I have been teaching for almost 30 years. I have been primarily a mathematics teacher, but along the way I have taught many other subjects, including leadership, economics, and problem solving. I have worked in the financial sector, retail sector, and information technology sector as well. This is the experience that I will bring to bear on this course, and I hope that you can benefit from my expertise.

#### Subject

Problem solving is an incredibly valuable skill for an employee in today's world. Take a look at any job description beyond the cashier level, and you will find problem solving in one form or another. The ability to solve problems can determine your success in any field, any career.

Problem solving has many different phases, which we will study in this course. In its simplest terms, problem solving involves the ability to understand the current circumstances, create a plan of action, act on that plan, and evaluate the results. We will be working with a particular heuristic, or system, for solving problems, which is one of many. I encourage you to work with this system until you are comfortable with it; then you can explore others from a position of strength.

#### Daily schedule

Each week our class will be divided into several pieces. The first piece, which will typically last about 15 minutes, involves a video presentation. The second piece, which will last about 1 hour in most cases, will involve a lecture about a particular part of the problem solving heuristic. The third piece will be an activity designed to improve your problem solving skills, and will last about 45 minutes to an hour. Each even week will have a quiz on the material of the previous weeks, which should take about 15 minutes. Finally, there will be a section about some aspect of arithmetic, last about 45 minutes.
