R. L. Bacon, N. R. Niles, 2012-12-06 It is difficult for a teacher to accept the fact that not all of the information in his or her field is a necessary part of the armamentarium of the student This holds for histologists and for that matter pathologists biochemists and ophthalmologists It may especially hold for those who were trained during exciting periods in the history of their discipline In the past two decades information in every basic medical science has increased greatly perhaps exponentially and the basic science curriculum has been compressed to the point where the medical student can reasonably be expected to acquire only a superficial knowledge of anyone of these sciences Hence the information provided must be carefully selected effectively presented in retainable doses and useful for understanding material to be presented later in the curriculum and for the solution of clinical problems In the compact courses of today the presentation of only enough data to support basic working concepts of structure and function is appropriate Additional factual information constitutes trivia which in our opinion interferes with effective development retention and use of the concepts This philosophy has been the basis for the preparation of this book Consistent with this philosophy the text is brief and the content has been carefully examined for its appropriateness to the needs of the medical student **Junqueira's Basic Histology: Text and Atlas, Sixteenth Edition** Anthony L. Mescher, 2021-06-16 This user friendly text and atlas combination is filled with clear explanations art and micrographs to elucidate key concepts and facilitate learning For more than four decades this trusted classic has been considered the hands down best overview of human tissue structure and function Accessible yet comprehensive Junqueira's Basic Histology provides everything you need to know about cell biology and histology integrating the material with that of biochemistry immunology endocrinology and physiology it provides an excellent foundation for subsequent studies in pathology It covers all tissues every organ system organs bone and cartilage blood skin and more Formatted in a way that optimizes the learning process Junqueira's explains how to study the structures of cells and tissues the cell cytoplasm and nucleus and the four basic tissue types and their role in the organ systems Each chapter includes

multiple choice self test questions enabling readers to assess their comprehension of important material some questions utilizing clinical vignettes or cases to provide real world relevance Junqueira s is written specifically for students of medicine and other health related professions as well as for advanced undergraduate courses in tissue biology and there is nothing else like it Features Self test questions in every chapter Key points and summary tables highlight key content Clinical correlations presented with each topic Illustrations depict key aspects of cell biology and histology Electron and light micrographs deliver a definitive atlas of cell tissue and organ structures Valuable appendix explains light microscopy stains Lab manual alerts readers to see what they are actually reading about in real life patients enhanced lab manual available online Links to Junqueira micrographs
