Historic Photographic Processes: A Guide to Creating Handmade Photographic Images Richard Farber, 1998-10-01

Historic Photographic Processes is a comprehensive user's guide to the historical processes that have become popular alternatives to modern and digital technology. Though many of the techniques, applications, and equipment were first developed in the nineteenth century, these same methods can be used today to create hand-crafted images that are more attractive and permanent than conventional prints or digital outputs. Fine art photographer Richard Farber incorporates extensive research with clearly written directions and resource lists to provide in-depth information on eight of the most enduring processes in photographic history, including salted paper, albumen, cyanotype, kallitype, platinum, palladium, carbon, carbrogum, bichromate, and bromoil. He guides the reader through each step, from selecting the appropriate paper and sensitizing it to exposing, developing, and toning the final print. Each method is accompanied by a short explanation of how it was originally used and its significance in the evolution of photography. Historic Photographic Processes contains more than fifty color and ten black and white images that beautifully illustrate each of the processes described. Chapters include an introduction to photographic techniques and applications, such as useful safelights, sizing paper, measuring solutions, exposure controls, ultraviolet light sources, and making enlarged negatives, as well as an extensive section on safety in and outside of the darkroom. The appendix provides important information on the chemicals discussed, as well as health and safety references, supply sources in the United States, Canada, and Europe, and a complete catalog of Internet resources. Allworth Press, an imprint of Skyhorse Publishing, publishes a broad range of books on the visual and performing arts, with emphasis on the business of art. alternative processes the cyanotype is the one closest to my heart I made my first cyanotype in 1999 I was intrigued by the blue images and wanted to test the cyanotype process to see what it had to offer I bought chemicals and spent an evening coating paper and cloth The results of the next day's printing surprised me Although the alchemy of the darkroom had always captivated me developing a print in the sun was like a liberation One of the things I found most refreshing about the process was the unpredictability of the results Some of my best prints were the product of happy accidents The developing process is straightforward The chemicals are cheap and most of the other items used can be found around the house Pre coated paper is available but one of the benefits of working with cyanotypes is the great flexibility of material and paper available to you Cyanotypes print on anything made of natural fibre Cotton linen silk handmade paper watercolor paper and rags are just number of alternatives Some artists even print on wood So if you want to explore a fun alternative photographic process or seriously want to experiment with producing unique fine art make a cyanotype
