where the data stream arrives one sample at a time and incremental optimal solutions are desirable It is also a useful guide for those who look for nonlinear adaptive filtering methodologies to solve practical problems **Adaptive Filtering Under Minimum Mean p-Power Error Criterion** Wentao Ma,Badong Chen,2024-05-31 Adaptive filtering still receives attention in engineering as the use of the adaptive filter provides improved performance over the use of a fixed filter under the time varying and unknown statistics environments This application evolved communications signal processing seismology mechanical design and control engineering The most popular optimization criterion in adaptive filtering is the well known minimum mean square error MMSE criterion which is however only optimal when the signals involved are Gaussian distributed Therefore many optimal solutions under MMSE are not optimal As an extension of the traditional MMSE the minimum mean p power error MMPE criterion has shown superior performance in many applications of adaptive filtering This book aims to provide a comprehensive introduction of the MMPE and related adaptive filtering algorithms which will become an important reference for researchers and practitioners in this application area The book is geared to senior undergraduates with a basic understanding of linear algebra and statistics graduate students or practitioners with experience in adaptive signal processing **Key Features** Provides a systematic description of the MMPE criterion Many adaptive filtering algorithms under MMPE including linear and nonlinear filters will be introduced Extensive illustrative examples are included to demonstrate the results **Theory of Affine Projection Algorithms for Adaptive Filtering**

Kazuhiko Ozeki,2015-07-22 This book focuses on theoretical aspects of the affine projection algorithm APA for adaptive filtering The APA is a natural generalization of the classical normalized least mean squares NLMS algorithm The book first explains how the APA evolved from the NLMS algorithm where an affine projection view is emphasized By looking at those adaptation algorithms from such a geometrical point of view we can find many of the important properties of the APA e g the improvement of the convergence rate over the NLMS algorithm especially for correlated input signals After the birth of the APA in the mid 1980s similar algorithms were put forward by other researchers independently from different perspectives This book shows that they are variants of the APA forming a family of APAs Then it surveys research on the convergence behavior of the APA where statistical analyses play important roles It also reviews developments of techniques to reduce the computational complexity of the APA which are important for real time processing It covers a recent study on the kernel APA which extends the APA so that it is applicable to identification of not only linear systems but also nonlinear systems The last chapter gives an overview of current topics on variable parameter APAs The book is self contained and is suitable for graduate students and researchers who are interested in advanced theory of adaptive filtering **Adaptive Filtering** Paulo S. R. Diniz,2012-08-14 In the fourth edition of Adaptive Filtering Algorithms and Practical Implementation author Paulo S R Diniz presents the basic concepts of adaptive signal processing and adaptive filtering in a concise and straightforward manner The main classes of adaptive filtering algorithms are presented in a unified framework using clear notations that

facilitate actual implementation The main algorithms are described in tables which are detailed enough to allow the reader to verify the covered concepts Many examples address problems drawn from actual applications New material to this edition includes Analytical and simulation examples in Chapters 4 5 6 and 10 Appendix E which summarizes the analysis of set membership algorithm Updated problems and references Providing a concise background on adaptive filtering this book covers the family of LMS affine projection RLS and data selective set membership algorithms as well as nonlinear sub band blind IIR adaptive filtering and more Several problems are included at the end of chapters and some of these problems address applications A user friendly MATLAB package is provided where the reader can easily solve new problems and test algorithms in a quick manner Additionally the book provides easy access to working algorithms for practicing engineers
