Numerical Simulation in Tunnelling Gernot Beer, 2012-12-06 For many years the Austrian tunneling industry has demanded that research is urgently required to establish a theoretical basis for the New Austrian Tunneling Method and to assist site engineers in the often difficult day to day decisions. In particular it was felt that numerical models need to be improved considerably in order to be able to act as useful tools in predicting soil rock mass behavior during tunneling. The required improvement not only refers to the quality of the models but also to their ease of use. As long as an experienced modeler is required to spend days in preparing the input and in interpreting the results the models will not be useful at the tunnel site. It is heartening therefore that a group of scientists in Austria has come together to attempt to tackle this challenging task. The initiative has been supported in a number of ways by the Austrian tunneling industry. All Austrian companies associated with tunneling sent representatives to the management advisory board which ensured that the research carried out in the project was of benefit to the industry. The Austrian Geomechanics Society sponsored the project with a considerable amount which was mainly used to cover site costs. HL AG and OSAG as well as the joint ventures allowed access to tunnel sites thereby making it possible to test new developments.

Sampling and Monitoring for the Mine Life Cycle McLemore, Virginia T., Smith, Kathleen S., Russell, Carol C., 2014-05-28 *Sampling and Monitoring for the Mine Life Cycle* provides an overview of sampling for environmental purposes and monitoring of environmentally relevant variables at mining sites. It focuses on environmental sampling and monitoring of surface water and also considers groundwater, process water, streams, rock, soil and other media including air and biological organisms. The handbook includes an appendix of technical summaries written by subject matter experts that describe field measurements, collection methods and analytical techniques and procedures relevant to environmental sampling and monitoring. The sixth of a series of handbooks on technologies for management of metal mine and metallurgical process drainage, this handbook supplements and enhances current literature and provides an awareness of the critical components and complexities involved in environmental sampling and monitoring at the mine site. It differs from most

information sources by providing an approach to address all types of mining influenced water and other sampling media throughout the mine life cycle Sampling and Monitoring for the Mine Life Cycle is organized into a main text and six appendices that are an integral part of the handbook Sidebars and illustrations are included to provide additional detail about important concepts to present examples and brief case studies and to suggest resources for further information Extensive references are included Proceeding of the Twenty-ninth Annual Convention, Indonesian Association of Geologists, Bandung, November 21-22, 2000: Mineral resources Ikatan Ahli Geologi Indonesia.
