

DEVELOPING FINGERPRINTS TECHNIQUES VIRTUAL LAB

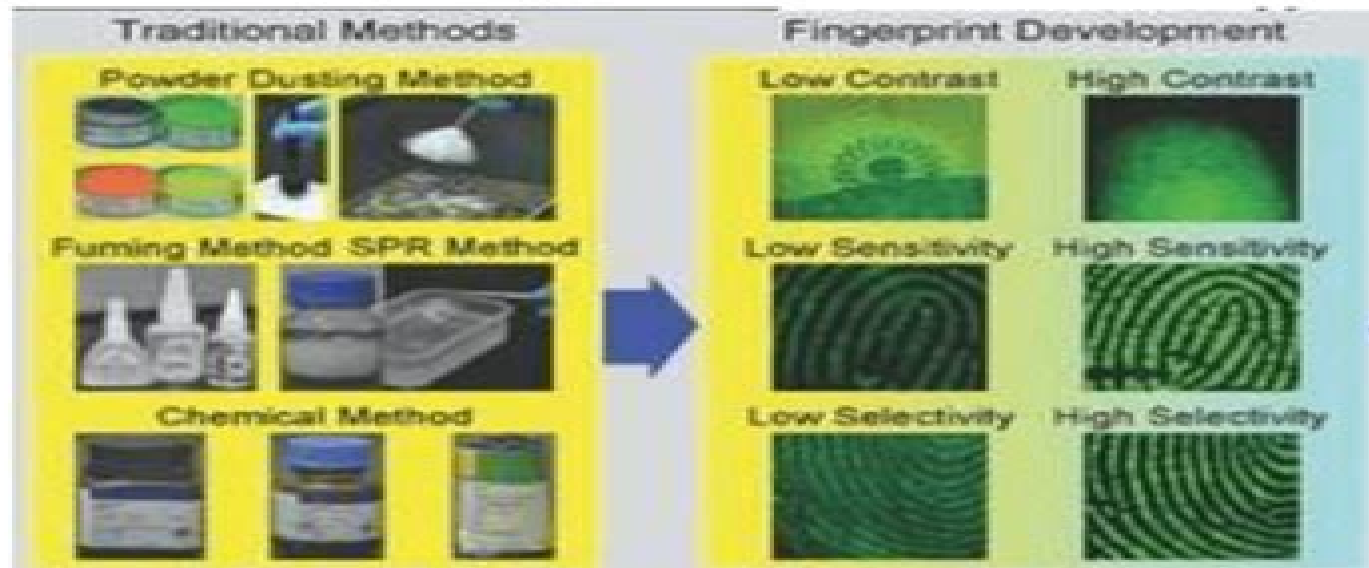

NAME:

DATE:

Latent prints are formed when the body's natural oils and sweat on the skin are deposited onto another surface. Latent prints can be found on a variety of surfaces; however, they are not readily visible, and detection often requires the use of fingerprint powders, chemical reagents, or alternate light sources. Generally speaking, the smoother and less porous a surface is, the greater the potential that any latent prints present can be found and developed.

In this virtual Lab you are going to observe different techniques and learn the basic procedures of developing latent fingerprints.
