The essential components and techniques of customized wire bending are detailed step by step, including trimming of casts, selection and proper manipulation of pliers, the first order bends in or out, second order bends up or down, and third order bends torque and optimal methods of adjustment to be used during orthodontic treatment. In addition, the author elucidates the fourth order bend, which is the understanding of how to use a wire effectively to apply orthodontic force to a patient over time. Technical images and case presentations illustrate each step of the process to ensure maximum comprehension. A must-have guide for orthodontic residents and practitioners alike. **Manual of Wire**

implants the use of the different AO instruments and with the essentials of the operative technique and of postoperative care. It also discusses the handling of the most important postoperative complications. The second part deals at length with the AO recommendations for the operative treatment of the most common closed fractures in the adult. This has been organized in anatomical sequence. The discussion of the closed fractures is followed by a discussion of open fractures in the adult, then by fractures in children and finally by pathological fractures. The third part presents in a condensed fashion the application of stable internal fixation to reconstructive bone surgery.

1 GENERAL CONSIDERATIONS

1 Aims and Fundamental Principles of the AO Method

The Chief Aim of Fracture Treatment is the Full Recovery of the Injured Limb. In every fracture there is a combination of damage to both the soft tissues and to bone. Immediately after the fracture and during the phase of repair we see certain local circulatory disturbances, certain manifestations of local inflammation as well as pain and reflex splinting. These three factors – that is, circulatory disturbances, inflammation and pain when combined with the defunctioning of bone joints and muscle – result in the so-called fracture disease.
