**Domingo de Soto and the Early Galileo** William A. Wallace, 2018-01-18 The unifying theme in this second volume of essays by William A Wallace to be published in the Variorum series is signaled in the title of the opening paper Domingo de Soto and the Iberian roots of Galileo's science The seven essays in the first part provide textual studies of Soto's early formulations of the laws of falling bodies the context in which they were developed in the 16th century and the ways in which they were transmitted in Spain and Portugal to the early 17th century mainly by Jesuit scholars The following essays focus on the young Galileo and his work at Pisa and Padua leading to his discovery of the law of uniform acceleration in free fall Textual evidence is presented for an indirect influence of Soto's work on Galileo mediated by Jesuits who were teaching at Padua in the first decade of the 17th century

on Scottish students living during the long eighteenth century this book argues that notebooks were paper machines and that notekeeping was a capability building exercise that enabled young notekeepers to mobilize everyday handwritten and printed forms of material and visual media in a way that empowered them to judge and enact the enlightened principles they encountered in the classroom Covering a rich selection of material ranging from simple scribbles to intricate watercolor diagrams the book reinterprets John Locke s comparison of the mind to a blank piece of paper the tabula rasa Although one of the most recognizable metaphors of the British Enlightenment scholars seldom consider why it was so successful for those who used it Each chapter uses one core notekeeping skill to reveal the fascinating world of material culture that enabled students in the arts sciences and humanities to transform the tabula rasa metaphor into a dynamic cognitive model Starting in the home moving to schools and ending with universities the book reconstructs the relationship between media and the mind from the bottom up It reveals that the cognitive skills required to make and use notebooks were not simply aids to reason rather they were part of reason itself
