Its Time To Be Bold:

Proceedings of the International School on Magnetic Resonance and Brain Function - XII Workshop Federico Giove, Itamar Ronen, 2018-09-06 In the last thirty years Magnetic Resonance has generated a wide revolution in biomedical research and in medical imaging in general More recently the in vivo studies of the human brain were extended by new original ways to the dynamic study of function and metabolism of the human brain The enormous interest in expanding the investigation of the brain is emphasizing the search for new NMR methods capable of extracting information of so far obscure aspects of the brain function In fact many quantitative approaches have been proposed in order to complement the information obtained by functional MRI and several multimodal and multiparametric approaches have been developed to exploit the information either functional or structural made available by the flexible contrast generation typical of MRI and to combine it with complementary information The XII workshop of the International School on Magnetic Resonance and Brain Function held in Erice between 17 April and 6 May 2016 was specially devoted to novel approaches aimed at better structural characterization of brain diseases and at investigating frontiers MRI approaches to better understand the brain function The papers included in this eBook offer a broad overview of the subjects covered during the Workshop including applications of multiparametric MRI to neurological diseases multimodal combination of MRI with electrophysiology advanced methods for the investigation of brain networks and of brain physiology and perspectives towards brain state reading

Westerns Victoria Lamont, 2016-08 At every turn in the development of what we now know as the western women writers have been instrumental in its formation Yet the myth that the western is male authored persists Westerns A Women's History debunks this myth once and for all by recovering the women writers of popular westerns who were active during the late nineteenth and early twentieth centuries when the western genre as we now know it emerged Victoria Lamont offers detailed studies of some of the many women who helped shape the western Their novels bear the classic hallmarks of the western cowboys schoolmarm's gun violence lynchings cattle branding while also placing female characters at the center of their western adventures and improvising with western conventions in surprising and ingenious ways In Emma Ghent Curtis's *The Administratrix* a widow disguises herself as a cowboy and infiltrates the cowboy gang responsible for lynching her husband Muriel Newhall's pulp serial character Sheriff Minnie comes to the rescue of a steady stream of defenseless female victims B M Bower Katharine Newlin Burt and Frances McElrath use cattle branding as a metaphor for their feminist critiques of patriarchy In addition to recovering the work of these and other women authors of popular westerns Lamont uses original archival analysis of the western fiction publishing scene to overturn the long standing myth of the western as a male dominated genre

Measuring Resting Cerebral Perfusion using Magnetic Resonance Imaging (MRI) James Duffin,Alex Bhogal,2024-07-12 The acquisition of resting cerebral perfusion measures using magnetic resonance imaging MRI is one of the assessments of cerebrovascular health used to discern how well patients are coping with anatomical changes such as stenosis and other factors impacting the supply of blood flow to the brain Perfusion measures may be obtained using several MRI based techniques including arterial spin labeling ASL and dynamic contrast enhanced methods that rely on injected contrast agents such as gadolinium Recently hypoxia induced changes in deoxyhemoglobin have been used as a non invasive contrast agent measuring the resulting changes in blood oxygen dependent BOLD signals with MRI With each approach the means through which voxel wise cerebral perfusion information is derived differs leading to the development a variety of analysis methods in recent studies This Research Topic is intended to attract manuscripts that advance the use of resting cerebral perfusion measures in clinical assessments of cerebrovascular health In pursuit of this aim a better understanding of several aspects are needed
