French Destroyers John Jordan,Jean Moulin,2015-06-22 A superb book that will keep any reader happy for months as they discover stories and episodes in French naval destroyer design and history Warship World Between the wars the French produced some of the largest and certainly the fastest destroyers in the world Known as Contre Torpilleurs these striking and innovatory super destroyers form the core of this book but the more conventional Torpilleurs d Escadre are also covered This history combines the technical and service material published in French language monographs over the past two decades with the authors own research from primary sources The structure of the book follows that of the highly successful French Cruisers with Part I devoted to the design of each of the classes built after 1922 The text is accompanied by detailed data tables and illustrated by a comprehensive set of specially drawn plans and schemas based on official documents as well as carefully selected photographs from French naval sources and from private collections Coverage runs down to the Le Hardi class the last pre war design Part II deals with the historical side covering the eventful careers of these ships before during and after the war This section is illustrated by maps specially drawn for the book and by contemporary photographs Like its highly successful predecessors French Battleships and French Cruisers this beautifully presented book fills a significant gap in the English library about French warships Apart from that the book will absolutely be a treasure on the bookshelves of collectors historians ships modelers and all other devotees of maritime history Go2War2 nl

Environmental Protection Agency,1983 *EPA Publications Bibliography* United States. Environmental Protection Agency,1987 *Warships after Washington* John Jordan,2011-11-21 The Washington Treaty of 1922 designed to head off a potentially dangerous arms race between the major

naval powers agreed to legally binding limits on the numbers and sizes of the principal warship types. In doing so it introduced a new constraint into naval architecture and sponsored many ingenious attempts to maximise the power of ships built within those restrictions. It effectively banned the construction of new battleships for a decade but threw greater emphasis on large cruisers. This much is broadly understood by anyone with an interest in warships but both the wider context of the treaty and the detail ramifications of its provisions are little understood. The approach of this book is novel in combining coverage of the political and strategic background of the treaty and the subsequent London Treaty of 1930 with analysis of exactly how the navies of Britain, the USA, Japan, France and Italy responded in terms of the types of warships they built and the precise characteristics of those designs. This was not just a matter of capital ships and cruisers but also influenced the development of super destroyers and large submarines. Now for the first time warship enthusiasts and historians can understand fully the rationale behind much of inter war naval procurement. The Washington Treaty was a watershed and this book provides an important insight into its full significance. **Destroyer Down** Arthur

Evans, 2010-08-19 The author of *Beneath the Waves* provides a thorough history of the sinkings of Britain's destroyer warships during World War II. His Majesty's destroyers had a long and costly war. Some eight thousand destroyer men did not survive. At the height of the war the Royal Navy was commissioning four new vessels a month which was only sufficient to replace those which had been sunk or severely damaged. This outstanding book contains the details of the majority of the sinkings that occurred throughout World War II and includes many firsthand accounts from the officers and crew involved.

R & D Abstracts Technology Reports Centre (Great Britain), 1980 **Mastermind of Dunkirk and D-Day** Brian Izzard, 2020-04-15 This detailed biography brings to life one of the greatest military heroes of WWII and demonstrates why his contributions were crucial to Allied victory. At the outbreak of the Second World War Admiral Sir Bertram Ramsay masterminded the evacuation of some 330 000 members of the British Expeditionary Force from Dunkirk. He went on to play a crucial role in the invasion of Sicily and the planning and execution of the D Day invasion where he commanded the 7 000 ships that delivered Allied forces to the beaches of Normandy. All this from a man who had retired in 1938 only to be persuaded back to the service by Winston Churchill himself. In 1944 Ramsay was promoted to Admiral and appointed Naval Commander in Chief for the D Day naval expeditionary force. A year later he died in a mysterious air crash. Though Ramsay's legacy has been remembered by the Royal Navy, his key role in the Allied victory has been widely forgotten. Now biographer Brian Izzard corrects this oversight, arguing that without Ramsay the outcome of both Dunkirk and D Day and perhaps the entire war could have been very different. **Popular Science**, 1949-06 Popular Science gives our readers the information
