Weathering stress factors can lead to deterioration or even complete failure. Material durability is therefore vital and products for outdoor usage or actinic exposure are designed so that the effects of artificial and natural weathering are minimized. This book is an important reference source for those involved in studying material durability: producing materials for outdoor use and actinic exposure; research chemists in the photochemistry field; chemists and material scientists designing new materials; users of manufactured products; those who control the quality of manufactured products; and students who want to apply their knowledge to real materials. Offers detailed coverage of theory, stress factors and methods of weathering. Provides specific information and numerical data for 52 polymers and 42 groups of industrial products including characteristic changes and degradation mechanisms. Discusses major additional topics such as weathered materials for recycling and the interrelation between corrosion and weathering. Provides graphical illustrations and numerical data to examine the weathering of major polymers and industrial products.
