Lindsey, Johnny S. Tolliver, Thomas Lindblad, 2005-10-13 JavaTech is a practical introduction to the Java programming language with an emphasis on the features that benefit technical computing After presenting the basics of object oriented programming in Java it examines introductory topics such as graphical interfaces and thread processes It goes on to review network programming and develops Web client server examples for tasks such as monitoring remote devices The focus then shifts to distributed computing with RMI Finally it examines how Java programs can access the local platform and interact with hardware Topics include combining native code with Java communication via serial lines and programming embedded processors An extensive web site supports the book with additional instructional materials JavaTech demonstrates the ease with which Java can be used to create powerful network applications and distributed computing applications It will be used as a textbook for programming courses and by researchers who need to learn Java for a particular task **Programming Mobile Devices**

Tommi Mikkonen, 2007-03-19 With forewords by Jan Bosch Nokia and Antero Taivalsaari Sun Microsystems Learn how to programme the mobile devices of the future The importance of mobile systems programming has emerged over the recent years as a new domain in software development The design of software that runs in a mobile device requires that developers combine the rules applicable in embedded environment memory awareness limited performance security and limited resources with features that are needed in workstation environment modifiability run time extensions and rapid application development Programming Mobile Devices is a comprehensive practical introduction to programming mobile systems The book is a platform independent approach to programming mobile devices it does not focus on specific technologies and devices instead it evaluates the component areas and issues that are common to all mobile software platforms This text will enable the designer to programme mobile devices by mastering both hardware aware and application level software as well as the main principles that guide their design Programming Mobile Devices Provides a complete and authoritative overview of programming mobile systems Discusses the major issues surrounding mobile systems programming such as understanding of embedded systems and workstation programming Covers memory management the concepts of applications dynamically linked libraries concurrency handling local resources networking and mobile devices as well as security features Uses generic examples from JavaTM and Symbian OS to illustrate the principles of mobile device programming Programming Mobile Devices is essential reading for graduate and advanced undergraduate students academic and industrial researchers in the field as well as software developers and programmers

Java Web Services David A. Chappell, Tyler Jewell, 2002 This volume offers the experienced Java developer a way into the Web services world It explains the range of technologies in use and how they relate to Java and shows Java developers how to put them to use to solve real problems Bluetooth Application Programming with the Java APIs C Bala Kumar, Paul J. Kline, Timothy J. Thompson, 2004 About the Authors C Bala Kumar is a Distinguished Member of the Technical Staff at Motorola He chaired the industry expert group that defined the Java APIs for Bluetooth wireless technology He currently leads the systems software team for wireless platforms in Motorola s Semiconductor Products Sector Paul J Kline is a Distinguished Member of the Technical Staff at Motorola and the maintenance lead for the JABWT specification He currently works on the System Software Architecture team in Motorola s Semiconductor Products Sector Timothy J Thompson is a Senior Software Engineer on the System Software Architecture team in Motorola s Semiconductor Products Sector He was the OBEX architect on the JABWT specification team at Motorola

Java I/O Elliott Rusty Harold, 2006-05-16 All of Java s Input Output I O facilities are based on streams which provide simple ways to read and write data of different types Java provides many different kinds of streams each with its own application The universe of streams is divided into four large categories input streams and output streams for reading and writing binary data and readers and writers for reading and writing textual character data You re almost certainly familiar with the basic kinds of streams but did you know that there s a CipherInputStream for reading encrypted data And a

ZipOutputStream for automatically compressing data Do you know how to use buffered streams effectively to make your I O operations more efficient Java I O 2nd Edition has been updated for Java 5 0 APIs and tells you all you ever need to know about streams and probably more A discussion of I O wouldn't be complete without treatment of character sets and formatting Java supports the Unicode standard which provides definitions for the character sets of most written languages Consequently Java is the first programming language that lets you do I O in virtually any language Java also provides a sophisticated model for formatting textual and numeric data Java I O 2nd Edition shows you how to control number formatting use characters aside from the standard but outdated ASCII character set and get a head start on writing truly multilingual software Java I O 2nd Edition includes Coverage of all I O classes and related classes In depth coverage of Java's number formatting facilities and its support for international character sets

Java Data Objects David Jordan, Craig Russell, 2003-04-22 Java Data Objects revolutionizes the way Java developers interact with databases and other data stores JDO allows you to store and retrieve objects in a way that's natural to Java programmers Instead of working with JDBC or EJB's container managed persistence you work directly with your Java objects You don't have to copy data to and from database tables or issue SELECTs to perform queries your JDO implementation takes care of persistence behind the scenes and you make queries based on the fields of your Java objects using normal Java syntax The result is software that is truly object oriented not code that is partially object oriented with a large database shaped lump on the back end JDO lets you save plain ordinary Java objects and does not force you to use different data models and types for dealing with storage As a result your code becomes easier to maintain easier to re use and easier to test And you're not tied to a specific database vendor your JDO code is entirely database independent You don't even need to know whether the datastore is a relational database an object database or just a set of files This book written by the JDO Specification Lead and one of the key contributors to the JDO Specification is the definitive work on the JDO API It gives you a thorough introduction to JDO starting with a simple application that demonstrates many of JDO's capabilities It shows you how to make classes persistent how JDO maps persistent classes to the database how to configure JDO at runtime how to perform transactions and how to make queries More advanced chapters cover optional features such as nontransactional access and optimistic transactions The book concludes by discussing the use of JDO in web applications and J2EE environments Whether you only want to read up on an interesting new technology or are seriously considering an alternative to JDBC or EJB CMP you'll find that this book is essential It provides by far the most authoritative and complete coverage available

Java Enterprise Best Practices O'Reilly Java Authors, 2002-12-18 Java developers typically go through four stages in mastering Java In the first stage they learn the language itself In the second stage they study the APIs In the third stage they become proficient in the environment It is in the fourth stage the expert stage where things really get interesting and Java Enterprise Best Practices is the tangible compendium of experience that developers need to breeze through this fourth and final stage of Enterprise Java mastery

Crammed with tips and tricks Java Enterprise Best Practices distills years of solid experience from eleven experts in the J2EE environment into a practical to the point guide to J2EE Java Enterprise Best Practices gives developers the unvarnished expert tested advice that the man pages don't provide what areas of the APIs should be used frequently and which are better avoided elegant solutions to problems you face that other developers have already discovered what things you should always do what things you should consider doing and what things you should never do even if the documentation says it's ok Until Java Enterprise Best Practices Java developers in the fourth stage of mastery relied on the advice of a loose knit community of fellow developers time consuming online searches for examples or suggestions for the immediate problem they faced and tedious trial and error But Java has grown to include a huge number of APIs classes and methods Now it is simply too large for even the most intrepid developer to know it all The need for a written compendium of J2EE Best Practices has never been greater Java Enterprise Best Practices focuses on the Java 2 Enterprise Edition J2EE APIs The J2EE APIs include such alphabet soup acronyms as EJB JDBC RMI XML and JMX

Learning Wireless Java Qusay H. Mahmoud, 2002 A solid introduction to working with the Mobile Information Device Profile MIDP which contains the APIs designed specifically for writing applications that need to run on wireless and embedded devices It includes reference material on the core and javax microedition classes as well as on the classes specific to the various wireless platforms the J2ME supports

Bluetooth Application Programming with the Java APIs Essentials Edition Timothy J. Thompson, C Bala Kumar, Paul J. Kline, 2008-04-02 Adoption of Bluetooth wireless technology has become ubiquitous in the last few years One of the biggest steps forward is the standardization of Java APIs for Bluetooth wireless technology JABWT The latest updates to this standard is explained in detail in this book The JABWT standard defined by the JSR 82 Java Specification Request supports rapid development of Bluetooth applications that are portable secure and highly usable Wireless device manufacturers have responded overwhelmingly to the JABWT specification by implementing JABWT applications in mobile phones and other personal wireless communications products Bluetooth Application Programming Essentials Programming with the Java APIs explains in detail how to write Bluetooth applications using the Java APIs to exploit the power of both technologies Written by the specification lead for JSR 82 and two other key participants in developing the standards of JABWT this book provides the authoritative explanations and concrete examples needed to get started right away This book provides embedded Java developers with to the point information on the APIs in the specification with detailed programmatic examples of the APIs in use A NEW chapter on the Push Registry definition a new feature in the 1.1 version of JSR 82 has been added Finally the new Essentials version of the book will update the remaining chapters to reflect changes in the latest Bluetooth spec 2.1 and the industry as a whole By focusing only on the essentials this concise resource enables software and hardware vendors to quickly develop Bluetooth applications for mobile devices in an increasingly competitive market The updated material examines crucial programming areas including RFCOMM OBEX device discovery service discovery and L2CAP which allows

developers to not only successfully design but master and build Java APIs for Bluetooth Wireless Technology Includes a new and valuable chapter that delineates the pivotal Push Registry feature a recent development that will help programmers avoid the common problem of connection collision By providing real world issues and problems involved in implementing the Java APIs specification the book allows developers to identify with the text and encourages repeated reference **Software Applications: Concepts, Methodologies, Tools, and Applications** Tiako, Pierre F.,2009-03-31 Includes articles in topic areas such as autonomic computing operating system architectures and open source software technologies and applications

JavaFX Developer's Guide Kim Topley,2010-09-24 Updated for JavaFX 1.3 The JavaFX platform makes it possible to write applications that can be deployed across devices ranging from cell phones to desktops with little or no change required JavaFX applications are written using JavaFX Script a new and easy to use scripting language Kim Topley's JavaFX™ Developer's Guide thoroughly covers the JavaFX language and its core libraries and shows you step by step how to develop and deliver JavaFX applications for the desktop and for mobile devices It provides complete coverage of all aspects of the language including Language syntax Tools you can use to develop debug and deploy JavaFX applications User interface classes Animation How to play audio and video How to use RESTful Web services and databases to retrieve the data for your application How to create custom components Transformations User interface basics attributes events and controls JavaFX and networking JavaFX development with NetBeans and Eclipse Packaging and deployment Topley highlights critical topics that other books gloss over presents detailed examples that stretch JavaFX to its limits and shows you exactly how to build on the skills you already have Whether you've been focused on HTML XML CSS Web development or Java Swing this book will help you get outstanding results with JavaFX **Embedded and Ubiquitous Computing** Laurence T. Yang,Minyi

Guo,Guang R. Gao,Niraj K. Jha,2004-07-30 Welcome to the proceedings of the 2004 International Conference on Embedded and Ubiquitous Computing EUC 2004 which was held in Aizu Wakamatsu City Japan 25-27 August 2004 Embedded and ubiquitous computing are emerging rapidly as exciting new paradigms and disciplines to provide computing and communication services all the time everywhere Its systems are now invading every aspect of life to the point that they are disappearing inside all sorts of appliances or can be worn unobtrusively as part of clothing and jewelry etc This emergence is a natural outcome of research and technological advances in embedded systems pervasive computing and communications wireless networks mobile computing distributed computing and agent technologies etc Its explosive impact on academia industry government and daily life can be compared to that of electric motors over the past century but promises to revolutionize life much more profoundly than elevators electric motors or even personal computer evolution ever did The EUC 2004 conference provided a forum for engineers and scientists in academia industry and government to address all the resulting profound challenges including technical safety social legal political and economic issues and to present and discuss their ideas results work in progress and experience on all aspects of embedded and ubiquitous computing There was a very

large number of paper submissions 260 from more than 20 countries and regions including not only Asia and the Pacific but also Europe and North America All submissions were reviewed by at least three program or technical committee members or external reviewers
