Integrative Production Technology for High-Wage Countries Christian Brecher,2011-12-17 Industrial production in high wage countries like Germany is still at risk Yet there are many counter examples in which producing companies dominate their competitors by not only compensating for their specific disadvantages in terms of factor costs e g wages energy duties and taxes but rather by minimising waste using synchronising integrativity as well as by obtaining superior adaptivity on alternating conditions In order to respond to the issue of economic sustainability of industrial production in high wage countries the leading production engineering and material research scientists of RWTH Aachen University together with renowned companies have established the Cluster of Excellence Integrative Production Technology for High Wage Countries

This compendium comprises the cluster's scientific results as well as a selection of business and technology cases in which these results have been successfully implemented into industrial practice in close cooperation with more than 30 companies of the industrial production sector

Future of Airplane Factory George Nicholas Bullen, 2019-05-28 The Future of Airplane Factory Digitally Optimized Intelligent Airplane Factory defines the architecture key building blocks and roadmap for actualizing a future airplane factory FAF that is digitally optimized for intelligent airplane assembly They fit and integrate with other FAF building blocks that aggregate to a Digitally Optimized Intelligent Airplane Factory DOIAF The word intelligent refers to the ability of a system to make right decisions and take right action in the highly dynamic and fluid environment of the modern airplane manufacturing space The event driven dynamics inherent in the complexity of this environment drive the need for expert knowledge which resides in intelligence systems incorporating the experience of experts Expert knowledge need not be smart brilliant or possess genius as long as the outcomes are derived from right decisions resulting in right actions applied rapidly to sustain an optimized factory enterprise Complete factory enterprise visibility requires a higher order of decision capability that current operating systems do not have A highly visible factory collects and displays data and information as it happens at a rate beyond the ability of humans and current systems to analyze process decide and act upon Expert systems are constructed to present humans with right decisions in the form of optimal choices for right actions by incorporating the knowledge of experts into the logic for the decision Structured Knowledge Based Expert Systems SKBES are incorporated in this book and defined as a critical component for full enterprise actionable visibility The power of the Digitally Optimized Intelligent Airplane Factory not only is found in its ability to unify the factory reduce touch labor improve quality and streamline throughput but it also enables a significant reduction in above the shop floor support and management Such an ecosystem frees the human to focus on the complexity of interpersonal responsibilities If the use of a DOIAF can be viewed as a holistic mechanism then the human can be the agent engaging with that mechanism improving negotiations for pricing contracts or other person to person events that require instinct and relationship

collaborators and academics *Gearing up and accelerating cross-fertilization between academic and industrial robotics research in Europe*: Florian Röhrbein, Germano Veiga, Ciro Natale, 2013-10-11 This monograph by Florian Röhrbein, Germano Veiga and Ciro Natale is an edited collection of 15 authoritative contributions in the area of robot technology transfer between academia and industry. It comprises three parts on Future Industrial Robotics, Robotic Grasping as well as Human Centered Robots. The book chapters cover almost all the topics nowadays considered hot within the robotics community, from reliable object recognition to dexterous grasping, from speech recognition to intuitive robot programming, from mobile robot navigation to aerial robotics, from safe physical human robot interaction to body extenders. All contributions stem from the results of ECHORD, the European Clearing House for Open Robotics Development, a large scale integrating project funded by the European Commission within the 7th Framework Programme from 2009 to 2013. ECHORD's two main pillars were the so called experiments: 52 small sized industry driven research projects and the structured dialog, a powerful interaction instrument between the stakeholders. The results described in this volume are expected to shed new light on innovation and technology transfer from academia to industry in the field of robotics.
