A New Science of Heaven Robert

Temple,2022-03-24 This book is an important contribution and I hope it will open many minds What is particularly important in it are the discussions of David Bohm of bioplasma biophotons and bioelectronics PROFESSOR ZBIGNIEW WOLKOWSKI Sorbonne University Paris Answers so many questions scientific and esoteric about the true nature of our reality A seminal work Will revolutionise how we frame reality and the thinking of everyone on this planet Kudos to Professor Temple for striking the first match to light the fire NEW DAWN The story of the science of plasma and its revolutionary implications for the way we understand the universe and our place in it Histories of science in the 20th century have focused on relativity and quantum mechanics But quietly in the background there has been a third area of exploration which has equally important implications for our understanding of the universe It is unknown to the general public despite the fact that many Nobel prize winners senior academics and major research centres around the world have been devoted to it it is the study of plasma Plasma is the fourth state of matter and the other three gas liquid and solids emerge out of plasma This book will reveal how over 99% of the universe is made of plasma and how there are two gigantic clouds of plasma called the Kordylewski Clouds hovering between the Earth and the Moon only recently discovered by astronomers in Hungary Other revelations not previously known outside narrow academic disciplines include the evidence that in certain circumstances plasma exhibits features that suggest they may be in some sense alive clouds of plasma have evolved double helixes banks of cells and crystals filaments and junctions which could control the flow of electric currents thus generating an intelligence similar to machine intelligence We may in fact have been looking for signs of extra terrestrial life in the wrong place Bestselling author Robert Temple has been following the study of plasma for decades and was personally acquainted with several of the senior scientists including Nobel laureates at its forefront including Paul Dirac David Bohm Peter Mitchell and Chandra Wickramasinghe who has co written an academic paper with Temple BioTra N.
