Rising Stars in Parasite Immunology 2021 Pedro H. Gazzinelli-Guimaraes, Anton Götz, Christine Hopp, 2022-12-05 The Molecular Mechanisms of Regulatory T cell Immunosuppression Kendall A. Smith, Ever since Regulatory T cells T Regs were first defined as peripheral CD4 T cells that express the interleukin 2 IL 2 receptor alpha chain IL 2Ra there have been intensive efforts to determine the molecular mechanisms whereby this minor subset of CD4 T cells 5-10% nonspecifically suppresses all potential effector T cells whether reactive to self or non self antigens Multiple possible molecular mechanisms have been implicated including the scavenging of IL 2 via the expression of high densities of IL 2Rs the inhibition of antigen presentation via CTLA 4 molecules leading to decreased IL 2 production the activation of intracellular cAMP thereby suppressing both IL 2 production and action and the production of suppressive cytokines such as IL 10 and Tumor Growth Factor beta to list a few However the field has thus far failed to come to a consensus such that some investigators have now asserted that many molecular mechanisms may be operative in fact that perhaps all of the described mechanisms may account for the suppressive effects of these cells acting either simultaneously or sequentially Thus this Research Topic is focused on articles that can shed some new light on the molecular mechanisms responsible for T Reg immunosuppression *Science Citation Index*, 1992 Vols for 1964 have guides and journal lists Lineage II, 2004 Finding Order in the Chaotic Chronicle Player tested tips to help you survive advance
