At the Dawn of Airpower Laurence M Burke, 2022-05-15 At the Dawn of Airpower The U S Army Navy and Marine Corps Approach to the Airplane 1907 1917 examines the development of aviation in the U S Army Navy and Marine Corps from their first official steps into aviation up to the United States declaration of war against Germany in April 1917 Burke explains why each of the services wanted airplanes and show how they developed their respective air arms and the doctrine that guided them His narrative follows aviation developments closely delving deep into the official and personal papers of those involved and teasing out the ideas and intents of the early pioneers who drove military aviation Burke also closely examines the consequences of both accidental and conscious decisions on the development of the nascent aviation arms Certainly the slow advancement of the technology of the airplane itself in the United States compared to Europe in this period affected the creation of doctrine in this period Likewise notions that the war that broke out in 1914 was strictly a European concern reinforced by President Woodrow Wilson s intentions to keep the United States out of that war meant that the U S military had no incentive to keep up with European military aviation Ultimately however he concludes that it was the respective services inability to create a strong durable network connecting those flying the airplanes regularly technology advocates with the senior officers exercising control over their budget and organization technology patrons that hindered military aviation during this period **Lighter Than Air** Guy Warner, 2016-06-30 Neville Florian Usborne entered the Royal Navy as a cadet in 1897 In the years between him joining up and the outbreak of the First World War he engaged in a huge number of enterprises and endeavours Praise and respect garnered in accordance with his achievements all helped to establish his reputation in later years as an irreplaceable pioneer and a leading light of early British airship design His fertile imagination and enterprising spirit fused to form a dynamic personality able in wartime to draw up countless schemes in an effort to outwit the enemy His chief task during the Great War was to dream up new tactics and designs to combat the Zeppelin menace perceived as one of the most damaging threats of the entire conflict He was also deeply involved in the

design of the very successful SS and Coastal Class airships indeed during 1915 he was actually appointed Inspector Commander of Airships at the Admiralty Unfortunately his illustrious career was destined to be cut short in 1916 when he was killed testing a prototype of one of his own designs This new biography seeks to shine a light on an overlooked pioneer of early aviation and it does so in entertaining and reverential style The importance of Osborne the pioneer is made plain as one of his contemporaries commented upon his death No one can talk of the early days of British airship design without mention of his name and work A personality was lost on that February day which was irreplaceable

Empires of the Sky Alexander Rose, 2021-05-25 The Golden Age of Aviation is brought to life in this story of the giant Zeppelin airships that once roamed the sky a story that ended with the fiery destruction of the Hindenburg Genius a definitive tale of an incredible time when mere mortals learned to fly Keith O'Brien The New York Times At the dawn of the twentieth century when human flight was still considered an impossibility Germany's Count Ferdinand von Zeppelin vied with the Wright Brothers to build the world's first successful flying machine As the Wrights labored to invent the airplane Zeppelin fathered the remarkable airship sparking a bitter rivalry between the two types of aircraft and their innovators that would last for decades in the quest to control one of humanity's most inspiring achievements And it was the airship not the airplane that led the way In the glittery 1920s the count's brilliant protégé Hugo Eckener achieved undreamed-of feats of daring and skill including the extraordinary Round the World voyage of the Graf Zeppelin At a time when America's airplanes rickety deathtraps held together by glue screws and luck could barely make it from New York to Washington D.C. Eckener's airships serenely traversed oceans without a single crash fatality or injury What Charles Lindbergh almost died doing crossing the Atlantic in 1927 Eckener had effortlessly accomplished three years before the Spirit of St. Louis even took off Even as the Nazis sought to exploit Zeppelins for their own nefarious purposes Eckener built his masterwork the behemoth Hindenburg a marvel of design and engineering Determined to forge an airline empire under the new flagship Eckener met his match in Juan Trippe the ruthlessly ambitious king of Pan American Airways who believed his fleet of next-generation planes would vanquish Eckener's coming airship armada It was a fight only one man and one technology could win Countering each other's moves on the global chessboard each seeking to wrest the advantage from his rival the struggle for mastery of the air was a clash not only of technologies but of business diplomacy politics personalities and the two men's vastly different dreams of the future Empires of the Sky is the sweeping untold tale of the duel that transfixed the world and helped create our modern age
