Polymer Structure Characterization Richard A Pethrick, 2015-10-20 The different physical properties displayed by low

molar mass organic materials and polymers are a result of their molecular organisation. In order to understand the structure property relationship of a material it is necessary to first look at the interactions at a molecular level This new edition of Polymer Structure Characterization provides readers with the background needed to understand the factors that influence molecular organization and how this affects the morphology and bulk physical properties of a material In order to introduce the concepts the book first looks at small molecular systems and builds up to complex macromolecular systems The second edition has been fully revised and updated to include new examples and references Topics covered include organic crystals liquid crystals plastic crystals polymer crystal growth amorphous glassy materials polymer surfaces and interfaces colloids and molecular organization in liquids as well as two new chapters on self assembly and biopolymer systems The book is intended to provide complimentary material for a range of undergraduate and postgraduate courses in materials science molecular chemistry and chemical physics In addition to polymer and material scientists the book would also be of interest to chemists and physicists studying the properties of organic materials Nanophotonic Materials Ralf B. Wehrspohn, Heinz-Siegfried Kitzerow, Kurt Busch, 2008-09-08 Nanophotonic Materials Photonic Crystals Plasmonics and Metamaterials summarizes the work and results of a consortium consisting of more than 20 German research groups concentrated on photonics crystals research over the last seven years Illustrated throughout in full color the book provides an overview of these novel materials spanning the entire range from fundamentals to applications Molecular Mixed <u>Crystals</u> Miquel Angel Cuevas-Diarte, Harry A.
