industrial automation challenges **Visual Informatics: Bridging Research and Practice** Halimah Badioze Zaman, Peter Robinson, Maria Petrou, Patrick Olivier, Heiko Schröder, 2009-11-14 Visual informatics is a field of interest not just among the information technology and computer science community but also other related fields such as engineering medical and health informatics and education starting in the early 1990s Recently the field is gaining more attention from researchers and industry It has become a multidisciplinary and transdisciplinary field related to research areas such as computer vision visualization information visualization real time image processing medical image processing image information retrieval virtual reality augmented reality pervasive visual mathematics 3D graphics multimedia fusion visual data mining visual ontology as well as services and visual culture Various efforts have been vested in different research but operationally many of these systems are not prominent in the mass market and thus knowledge and research on these phenomena within the mentioned areas need to be shared and disseminated It is for this reason that the Visual Informatics Research Group from Universiti bangsaan Malaysia UKM decided to spearhead this initiative to bring together experts in this very diversified but important research area so that more concerted efforts can be undertaken not just within the visual informatics community in Malaysia but from other parts of the world namely Asia Europe Oceania and USA This first International Visual Informatics Conference IVIC 2009 was conducted collaboratively by the visual informatics research community from the various public and private institutions of higher learning in Malaysia and hosted by UKM *Multimedia Networking* Jenq-Neng Hwang, 2009-04-16 This authoritative guide to multimedia networking balances just the right amount of theory with practical design and integration knowledge *Exploratory Image Databases* Simone Santini, 2001-09-05 The explosion of computer use and internet communication has placed new emphasis on the ability to store retrieve and search for all types of images both still photo and video images The success and the future of visual information retrieval depends on the cutting edge research and applications explored in this book It combines the expertise from both computer vision and database research Unlike text retrieval and text numeric databases the challenges of image databases are enormous How do you use data mining to search for an image if you do not have key words to search Exploratory Image Databases introduces the idea that it is possible to solve this problem by merging database systems into a single search and browse activity called exploration Exploratory Image Databases is one of the first single author books that unifies the critical emerging topic of image databases A new approach to image databases the work is divided into four central parts introduction to the problems that image database research must solve computer vision and information retrieval techniques image database issues and interface and engines for visual searches Example Imagine the difficulty of building and using a database for face recognition where an image of a face is used In order to effectively use the image a huge number of characteristics would need to be entered in the database The goal of future image databases is to use hardware and software to recognize and categorize images without typing in characteristics Comprehensive coverage of the image analysis as well as the database theoretical

aspects of image databases Extensive coverage of interfaces and interaction models with a theoretical framework for the development of new interaction schemes Identifies three interaction models between users and image databases two of which have no counterpart in traditional databases Coverage of the relation between image and text including mixed search models and the automatic determination of the relation between images and text on large corpuses like the web Analysis of the process of signification in images and its influence on the interaction models and technological problems of image databases
