Inflammation And Gastrointestinal Cancers Recent Results In Cancer Research:

Inflammation and Gastrointestinal Cancers Janusz A. Z. Jankowski, 2011-08-08 Inflammation in gastrointestinal mucosa can remodel the topography of the overlying epithelium. If such inflammation is chronic it has fundamental clinical consequences, the principal of which is premalignant metaplasia throughout the alimentary tract. Furthermore, mucosal inflammation, even if subtle, is the single most common pathway for GI cancer. This book discusses all aspects of the relation between inflammation and GI cancer from the basic science through to the translational science which is helping in the optimization of clinical management strategies. Among the topics considered are the impact of inherited syndromes, the roles of acid reflux, H. pylori, inflammatory bowel disease and primary sclerosing cholangitis, screening strategies, targeted drug therapies, genetics and the use of endoscopic methods. The authors are the best in their field and this book is designed for the enthusiastic student as well as the professional in GI science and medicine. *Diagnosis and Treatment of Gastrointestinal Cancers, An Issue of Gastroenterology Clinics of North America, E-Book* Marta Davila, Raquel E. Davila, 2022-09-25 In this issue of *Diagnosis and Treatment of Gastrointestinal Cancers*, guest editors Drs Marta Davila and Raquel E. Davila bring their considerable expertise to the topic of *Diagnosis and Treatment of Gastrointestinal Cancers*. The early detection, diagnosis and accurate staging of GI cancers along with enhanced imaging techniques, new therapies and a greater understanding of GI tumors at the molecular level has revolutionized the approach to GI cancer patients in recent years. In this issue, distinguished authors recognized internationally as leading authorities in the field provide an exhaustive review of the latest topics in GI cancer. Contains 13 practice-oriented topics including management of Barrett's esophagus and early esophageal adenocarcinoma, familial pancreatic cancer, colorectal cancer screening and early detection, the microbiome in gastrointestinal cancers and more. Provides in-depth clinical reviews on diagnosis and treatment of gastrointestinal cancers offering actionable insights for clinical practice. Presents the latest information on this timely focused topic under the leadership of experienced editors in the field. Authors synthesize and distill the latest research and practice guidelines to create clinically significant topic-based reviews. *Advanced Molecular Targets in the Diagnosis and Treatment of Gastrointestinal Cancers, volume II* Zsolt Kovács, Cornelia Braicu, Simona Gurzu, 2024-11-18 Gastrointestinal (GI) cancers are among the most common cancer types affecting millions worldwide with a poor survival rate and prognosis. GI cancers are within the most frequent malignancy with almost 150,000 new cases in 2020. On one hand, a large number of researches are focused on the diagnosis of GI cancers and more specifically new diagnostic approaches in upper and lower gastrointestinal tract cancers. On the other hand, in the last 10 years, several papers had been published about the possible therapeutic targets highlighting precision and personalized medicine. The goal of this Research Topic is to provide a discussion regarding new molecular targets for diagnostics, individualized treatment for better survival. We welcome Original Research Reviews, Systematic Reviews and Mini Reviews. We particularly welcome research regarding emerging therapeutic targets in GI

Gastrointestinal Cancer Immunotherapy: from Drug Resistance Mechanisms to Overcoming Strategies

Xiaofang Che,Yibo Fan,Jinyan Wang,Chunlei Zheng,Jia Wei,2023-06-15 Gastrointestinal GI cancers including gastric cancer colon cancer liver cancer esophageal cancer and pancreatic cancer seriously threaten the health of human beings worldwide with a high rate of morbidity and mortality The clinical successes achieved with immune checkpoint inhibitors ICIs targeting PD 1 PD L1 and CTLA 4 have opened a new cancer therapy era and brought new hope to cancer patients However the overall response rate ORR of ICI monotherapy in the non selective population is only about 20% in which some patients subsequently develop immunotherapy resistance Moreover the remaining 70 80% of patients displayed primary resistance to ICIs and a few patients even experienced hyper progression disease HPD Although PD L1 expression mismatch repair deficient MMRd high tumor mutational burden TMB H high homologous recombination deficiency HRD and tumor infiltrated immune cells TILs are known as effective biomarkers for immunotherapy growing studies have reported that ICIs could not improve the OS of all patients with PD L1 expression higher than 50% and the ORR of MSI H patients was only about 60% whereas some patients with low PD L1 expression or MSS could still benefit from immunotherapy indicating the complexity of ICI resistance Therefore it is of great importance and significance to explore the prediction biomarkers for primary or acquired immunotherapy resistance and elucidate their underlying molecular mechanisms and develop reversal strategies Due to the multiple steps of the cancer immune cycle and complex immune microenvironment any disorders of immune cell infiltration or T cell activation such as lack of antigens and or their presentation lack of response to antigen presentation and T cell priming could contribute to ICI resistance The combination with anti angiogenesis therapy radiotherapy chemotherapy and other ICIs has improved the efficacy of ICI therapy to some extent in the clinic Although numerous studies related to ICI resistance were reported in GI cancers due to the strong spatial temporal heterogeneity and the complex immune microenvironment in different kinds of GI cancers and different individuals many questions about ICI resistance and reversal strategies remain unsolved The aim of this Research Topic is to provide a forum to exhibit the latest research achievement related to the exploration of biomarkers for immunotherapy resistance including HPD and the underlying molecular mechanisms as well as the development of reversal strategies in GI cancers We hope this Research Topic will lead to a better understanding of precision cancer immunotherapy and provide useful clues for clinical application to benefit more GI cancer patients with immunotherapy
