*Program Development in Computational Logic* Maurice Bruynooghe, Kung-Kiu Lau, 2004-06-17 1 The tenth anniversary of the LOPSTR symposium provided the incentive for this volume LOPSTR started in 1991 as a workshop on logic program synthesis and transformation but later it broadened its scope to logic based program development in general that is program development in computational logic and hence the title of this volume The motivating force behind LOPSTR has been the belief that declarative paradigms such as logic programming are better suited to program development tasks than traditional non declarative ones such as the imperative paradigm Specification synthesis transformation or specialization analysis debugging and verification can all be given logical foundations thus providing a unifying framework for the whole development process In the past 10 years or so such a theoretical framework has indeed begun to emerge Even tools have been implemented for analysis verification and specialization However it is fair to say that so far the focus has largely been on programming in the small So the future challenge is to apply or extend these techniques to programming in the large in order to tackle software engineering in the real world Returning to this volume our aim is to present a collection of papers that reflect significant research efforts over the past 10 years These papers cover the whole development process specification synthesis analysis transformation and specialization as well as semantics and systems

**Informatica** Alex Wright, 2023-06-15 Informatica the updated edition of Alex Wright's previously published *Glut* continues the journey through the history of the information age to show how information systems emerge Today's information explosion may seem like a modern phenomenon but we are not the first generation or even the first species to wrestle with the problem of information overload Long before the advent of computers human beings were collecting storing and organizing information from Ice Age taxonomies to Sumerian archives Greek libraries to Christian monasteries Wright weaves a narrative that connects such seemingly far flung topics as insect colonies Stone Age jewelry medieval monasteries Renaissance encyclopedias early computer networks and the World Wide Web He suggests that the future of the information age may lie deep in our cultural past We stand at a precipice struggling to cope with a tsunami of data Wright provides some much needed historical perspective We can understand the predicament of information overload not just as the result of technological change but as the latest chapter in an ancient story that we are only beginning to
