Integration of Natural Language and Vision Processing Paul Mc Kevitt, 2012-12-06 Although there has been much progress in developing theories models and systems in the areas of Natural Language Processing NLP and Vision Processing VP there has heretofore been little progress on integrating these subareas of Artificial Intelligence AI This book contains a set of edited papers addressing computational models and systems for the integration of NLP and VP The papers focus on site descriptions such as that of the large Japanese 500 million Real World Computing RWC project on historical philosophical issues on systems which have been built and which integrate the processing of visual scenes together with language about them and on spatial relations which appear to be the key to integration The U S A Japan and the EU are well reflected showing up the fact that integration is a truly international issue There is no doubt that all of this will be necessary for the InformationSuperHighways of the future

Natural Language at the Computer Albrecht Blaser, 1988 Volume 19 of Group III Crystal and Solid State Physics deals with the magnetic properties of metals alloys and metallic compounds The amount of information available in this field is so substantial that several subvolumes are needed to cover it all The first subvolumes treat the intrinsic magnetic properties i e those magnetic properties which depend only on the chemical composition and the crystal structure So far subvolumes III 19a III 19b and III 19c have appeared Data on the properties that depend on the preparation of the samples measured as for instance thin films or amorphous alloys and the magnetic alloys used in technical applications are being compiled in the last subvolumes of III 19 In the first of these subvolume III 19g magnetic properties are given for several major types of crystalline and amorphous thin magnetic films that are supported by a substrate and for which a more or less coherent group of data is available The properties of sputtered metallic amorphous films containing 3d transition elements will be dealt with in the following subvolume

Automation of Reasoning J. Siekmann,G. Wrightson,2012-12-06 Kind of crude but it works boy it works AZan NeweZZ to Herb Simon Christmas 1955 In 1954 a computer program produced what appears to be the first computer generated mathematical proof Written by M Davis at the Institute of Advanced Studies USA it proved a number theoretic theorem in Presburger Arithmetic Christmas 1955 heralded a computer program which generated the first proofs of some propositions of Principia Mathematica developed by A Newell J Shaw and H Simon at RAND Corporation USA In Sweden H Prawitz D Prawitz and N Voghera produced the first general program for the full first order predicate calculus to prove mathematical theorems their computer proofs were obtained around 1957 and 1958 about

the same time that H Gelernter finished a computer program to prove simple high school geometry theorems Since the field of computational logic or automated theorem proving is emerging from the ivory tower of academic research into real world applications asserting also a definite place in many university curricula we feel the time has come to examine and evaluate its history The article by Martin Davis in the first of this series of volumes traces the most influential ideas back to the prehistory of early logical thought showing how these ideas influenced the underlying concepts of most early automatic theorem proving programs

Knowledge Representation and the Semantics of Natural Language Hermann Helbig, 2005-12-19 Natural Language is not only the most important means of communication between human beings it is also used over historical periods for the preservation of cultural achievements and their transmission from one generation to the other During the last few decades the flood of digitalized information has been growing tremendously This tendency will continue with the globalization of information societies and with the growing importance of national and international computer networks This is one reason why the theoretical understanding and the automated treatment of communication processes based on natural language have such a decisive social and economic impact In this context the semantic representation of knowledge originally formulated in natural language plays a central part because it connects all components of natural language processing systems be they the automatic understanding of natural language analysis the rational reasoning over knowledge bases or the generation of natural language expressions from formal representations This book presents a method for the semantic representation of natural language expressions texts sentences phrases etc which can be used as a universal knowledge representation paradigm in the human sciences like linguistics cognitive psychology or philosophy of language as well as in computational linguistics and in artificial intelligence It is also an attempt to close the gap between these disciplines which to a large extent are still working separately
