This book contributes to ongoing policy discussions on the internationalisation of innovation. Foreign owned enterprises account for a rising share of national innovation expenditures and have become key actors in the national innovation systems of almost all OECD countries. Their new roles give rise to both hopes and concerns. The author examines the innovative activities of foreign owned enterprises in Austria, a country with a huge share of overseas R D investment. Empirical analysis reveals that foreign owned enterprises exhibit a superior innovation performance compared to domestically owned enterprises. The performance differences however can be explained by factors such as firm size, sectoral affiliation and export intensity rather than by the ownership status. With respect to policy, the results neither confirm fears that foreign ownership could lead to an erosion of innovative activity in the host country nor do they provide arguments for specific incentives to attract foreign owned enterprises. Innovation policy should instead try to foster innovative capabilities of both foreign owned and domestically owned enterprises.

Advanced Synchrotron Radiation Techniques for Nanostructured Materials Chiara Battocchio, 2019-10-29. Nanostructured materials exploit physical phenomena and mechanisms that cannot be derived by simply scaling down the associated bulk structures and phenomena; furthermore, new quantum effects come into play in nanosystems. The exploitation of these emerging nanoscale interactions prompts the innovative design of nanomaterials. Understanding the behavior of materials on all length scales from the nanostructure up to the macroscopic response is a critical challenge for materials science. Modern analytical technologies based on synchrotron radiation (SR) allow for the non-destructive investigation of the chemical, electronic and magnetic structure of materials in any environment. SR facilities have developed revolutionary new ideas and experimental setups for characterizing nanomaterials involving spectroscopy, diffraction, scatterings, microscopy, tomography and all kinds of highly sophisticated combinations of such investigation techniques. This book is a collection of contributions addressing several aspects of synchrotron radiation as applied to the investigation of chemical, electronic and magnetic structure of nanostructured materials. The results reported here provide not only an interesting and multidisciplinary overview of the chemico-physical investigations of nanostructured materials carried out by state-of-the-art SR induced techniques but also an exciting glance into the future perspectives of nanomaterial characterization methods.

Exploring Uncertainty Sabina Jeschke, Eva-Maria Jakobs, Alicia Dröge, 2013-04-02. Der Umgang mit Ungewissheit und Unsicherheit besitzt in allen Wissenschaftsdisziplinen und Kulturen hohe Relevanz. Insgesamt zeichnet sich die Tendenz ab, dass schwach strukturierte Szenarien sowohl an Bedeutung als auch an Erfolg gewinnen und Konzepte, die sich gezielte Inkaufnahme und Umgang mit Unsicherheit auszeichnen, aufgrund ihrer Geschwindigkeit und Flexibilität häufig deterministischeren Konzepten überlegen sind. Vor diesem Hintergrund stellt sich die Frage nach einer fachübergreifenden Sichtweise auf das Konzept der Ungewissheit, insbesondere auch vor dem Hintergrund unterschiedlicher internationaler Disziplinen und geographischer Kulturen. Dieses Fachbuch beleuchtet das gleichsam grundlegende wie zukunftsweisende Thema Ungewissheit auf hohem wissenschaftlichen Niveau und wichtige Impulse für die multi- und inter-
