Half Empty Half Full Understanding The Psychological Roots Of Optimism:

Half Empty, Half Full Susan C. Vaughan, 2000 In this fascinating book Columbia University research scientist and psychoanalyst Susan Vaughan argues that our fundamental view of life as half empty or half full is determined by our capacity for emotional self modulation Based on her years of experience as a therapist and researcher Dr Vaughan shows how a sense of control over feelings like anger anxiety sadness and even elation promotes optimism and well being In contrast feeling out of control makes us pessimistic and glum Dr Vaughan asserts that the roots of self control are laid down through early interactions with caretakers everyday experiences that literally shape the neural circuitry of the brain The pictures of self and other formed in the first three years establish the basis for mood modulation in later life How to limit the impact of early life and reshape our neural circuitry for effective mood modulation is the promise and the gift of this book A convivial and accessible writer Vaughan engages the reader in a conversation about what really determines whether we see the proverbial glass as well as ourselves and the world around us as half empty or half full Half Empty, Half Full Susan C. Vaughan, 2001 The author a renowned research psychoanalyst challenges the idea that optimism is genetic arguing instead that experiences in the first three years of life often shape the neural pathways in the brain Reprint 35 000 first printing

Cultures of Optimism Oliver Bennett, 2015-01-02 What are the functions of optimism in modern societies How is hope culturally transmitted What values and attitudes does it reflect This book explores how and why powerful institutions propagate cultures of optimism in different domains such as politics work the family religion and psychotherapy A *Positive Psychology Perspective on Quality of Life* Anastasia Efklides, Despina Moraitou, 2012-11-02 The construct quality of life QoL since the 1980s when it was introduced is being used mainly in the context of health problems Areas of one's life that contribute to QoL are good physical and mental health efficient cognitive functioning social support being able to meet the requirements of professional life positive emotions etc Power 2003 Work on subjective well being SWB on the other hand was developed in the context of healthy everyday life it also has a history of more than 30 years During this 30 year period factors that have an impact on SWB such as SES gender health age and religiosity have been identified Diener 2000 A third independent line of research pertains to what has been called Positive Psychology Seligman Csikszentmihalyi 2000 that is an emphasis on human strengths such as optimism hope wisdom positive emotions resilience etc which contribute to positive functioning in life Recently SWB has been associated to human strengths and to the movement of positive psychology but this did not happen for QoL possibly because of its emphasis on people with health problems However QoL can be conceived of as a generic term that pertains to all people healthy or not In this sense it is closely related to SWB defined as happiness Diener 2000 Also QoL encompasses positive emotions that go beyond happiness and has the advantage that it can be applied to many different domains of life such as interpersonal relations health related situations and professional and educational strivings Moreover the mechanisms that underpin QoL and SWB can be studied in relation to people's goals and strengths of

character that is from a positive psychological perspective. Such a perspective can reveal the specificities of quality in the various domains of life and specifically the positive emotions and strengths that contribute to a happier, healthier and more successful life even in face of adversity. Therefore, despite the differences among the three theoretical traditions, namely QoL, SWB and positive psychology, it is possible to find the common ground they share and each of them can benefit from notions developed in the others. The aim of the present book is to bring together these three traditions, show the interactions of variables emphasized by them and give an integrative perspective from the positive psychology point of view. It also aims to extend the range of life situations in which one can look for quality and which go beyond the traditional emphasis of QoL on health problems. Thus, the content of the proposed book covers different age populations from children to older adults, healthy and people facing health problems as well as people facing problems in their interpersonal lives or in their pursuits. It also discusses factors that contribute to marital satisfaction, well-being in the school context and things that people value and cherish. The chapters refer to notions such as happiness, interest, resilience, wisdom, hope, altruism, optimism and spirituality, religiosity that represent unique human strengths. Finally, it emphasizes the role of goals and motivation that connect SWB with self-regulation and managing of one's life priorities. To conclude, the chapters included in the proposed edited book aim at bringing to the fore new theoretical developments and research on QoL, SWB and positive psychology that bridges previously distinct theoretical traditions. The proposed book covers a broad range of topics, addresses different theoretical interests and paves the way for a more integrative approach. Finally, it brings together an international set of authors from USA, Europe, Australia and Asia.
