**The First Generation of Electronic Records Archivists in the United States** Richard Cox, 2020-07-26 This book helps readers understand the current status of archivists in the United States. It addresses issues of professionalization by re-examining two major aspects of the archival community: institutional forms and structures and the basic educational foundations that are important to any profession. While United States archivists now seem poised to develop new approaches to the management of electronic records including research and education venues, this profession's long journey to reach this point is an interesting step on the continuing road to professionalization. The First Generation of Electronic Records Archivists in the United States represents the first major study of how and why American archivists have struggled to contend with the management of electronic records. The book provides a framework for studying this issue, includes suggestions for additional research, and serves as a basis for discussion about the continued strengthening of the archival profession. Despite more than thirty years of striving to manage electronic records, American archivists have not developed an effective infrastructure for this purpose. The First Generation of Electronic Records Archivists in the United States considers the evidence for this failure by evaluating archival literature on the topic of electronic records management. It examines how position descriptions in state government archives and job advertisements across the discipline have reflected a bias toward paper-based formats and the failure of graduate and continuing archival education programs to deal effectively with electronic records. The book details state government archives and position descriptions, trends and practices in the Information Age, 1976-1990 graduate archival education and electronic records, an analysis of current approaches and their strengths and weaknesses, the effectiveness of the NAGARA Institute as a form of advanced archival education, problems, challenges, opportunities, and needs for additional research. The First Generation of Electronic Records Archivists in the United States is an enlightening study for library and information science educators, archival graduate students, and archivists themselves as they work toward the professionalization of their field.

Comparing Communication Systems Klaus Bruhn Jensen, Rasmus Helles, 2022-11-29 Emphasizing the perspective of ordinary users, this book compares the uses of the internet in three centers of the global economy and world politics: China, Europe, and the United States. It examines the internet as the current centerpiece of communication systems encompassing interpersonal communication, mass communication, and social networking. The internet is unique as a medium in that it hosts both old media and new media. As such, it also integrates the prototypes of one-to-one interpersonal and one-to-many broadcast, along with many-to-many social media and many-to-one surveillance communication. This book considers how all these media and communicative practices are embedded in social structures, cultural traditions, and historical legacies of place. Comparing conditions in China, Europe, and the United States, the chapters provide an overview of the distinctive regulatory regimes framing the internet and its local uses, the place of the internet in everyday life in each setting, and how the internet serves as a resource for political, economic, and cultural actions and interactions. Linking comparative analysis of

media and social systems with ethnographic studies of internet usage on the ground this book will be of particular interest to students and scholars working in global media intercultural communication and internet studies      **Books in Series,**
