Government Manual, 2012 Handbook of Ocean Container Transport Logistics Chung-Yee Lee, Qiang Meng, 2014-12-13 This book is focused on the impact of ocean transport logistics on global supply chains. It is the first book solely dedicated to the topic linking the interaction of parties along this chain including shippers, terminal operators and line carriers. While ocean container transport logistics has been greatly studied, there are many important issues that have yet to receive the attention they deserve. The editors and contributing authors of *Ocean Container Transport Logistics: Making Global Supply Chain Effective* seek to address these topics and shed new light on the subject. The book is divided into three parts. Part I examines the innovation, trends, competition and business model of container terminal operations. In Part II, the book looks at how tactical and operational management is used in shipping liners. The chapters cover topics such as empty container repositioning, slow steaming, routing, network design and disruption management. Finally, Part III explores shippers and global supply chain management with chapters on transportation service procurement, hinterland transportation, green corridors as well as competition and cooperation in maritime logistics operations. The eighteen chapters of the book all highlight the immediate effect of ocean transport logistics on global supply chain. *Manual de transporte aéreo*

Consumer Preferences and Acceptance of Food Products Derek V. Byrne, 2020-12-01. The acceptance and preference of the sensory properties of foods are among the most important criteria determining food choice. Sensory perception and our response to food products and finally food choice itself are affected by a myriad of intrinsic and extrinsic factors. The pressing question is how do these factors specifically affect our acceptance and preference for foods both in and of themselves and in combination in various contexts both fundamental and applied. In addition, which factors overall play the largest role in how we perceive and behave towards food in daily life? Finally, how can these factors be utilized to affect our preferences and final acceptance of real food and food products from industrial production and beyond for healthier eating? A closer look at trends in research showcasing the influence that these factors and our senses have on our perception and affective response to food products and our food choices is timely. Thus, in this Special Issue collection *Consumer Preferences and Acceptance of Food Products*, we bring together articles which encompass the wide scope of multidisciplinary research in the space related to the determination of key factors involved, linked to fundamental interactions, cross-modal effects in different contexts, and eating scenarios, as well as studies that utilize unique study design approaches and methodologies. *Computer Program*
