HAMMER TYPE

Multi-Impact Spring Hammer

(See page 14)

Jaques Hammer mills are built especially to reduce limestone and other relatively non-plastic materials to "fines" (usually 100 mesh). Based on the new, spring-type hammer, featuring all their weight concentrated at the point of impact and rotating at high speed, these mills reduce the material with unusual efficiency. Low maintenance, prompt removal of broken plates in the hammer and the means that the wear from abrasion of processing is carried out on the material being to reduce the wearing parts, thereby increasing wear on the hammer and grate.

These compact, sturdy mills, with hammer bearing housings are made in six sizes ranging from 12" to 36" diameter. The output capacity in tons per hour is proportional to the size of the mill. The grate is made of heavy steel bars and is supported by a heavy frame. The grate is made of heavy steel bars and is supported by a heavy frame. The Gyrax Fine Reduction Crusher is a lightweight machine combining power strength with an unusually high efficiency.

The Traylor design of ball head and conical eccentric shaft in these crushers eliminates setting and grinding between crushing faces.

The construction is uncomplicated and easy to maintain after bearings, and the eccentric shaft shaft and gears are all mounted in oil with buffer oil circulating pump carried for a large oil reservoir.

These crushers are suitable for setting at extremely low settings, and by reason of their light weight, low feed rate and low power consumption are particularly adaptable for use with small portable crushing plants and specialized for crushing applications in process industries.

Can be equipped with either for or without driving pulley.

These crushers are manufactured under license to the Traylor Engineering & Mfg. Company of Birmingham, Ala., U.S.A. Type 'TY' and 'TZ' crushers are compact machines combining fine feed rates and feed rates. They are designed to handle materials of all sizes, from small stones to large boulders.
