are a major constraint to agricultural production particularly in the developing world Cost efficient biological control is a self
sustaining way to reduce this problem and produces fewer non target effects than chemical methods which can cause serious
damage to the environment This book covers the origin distribution and ecology of twenty model invasive weed species which
occur in habitats from tropical to temperate to aquatic Sustainable biological control of each weed using one or more
arthropods is discussed The aim is to provide ecological management models for use across the tropical world and to assist in
the assessment of potential risks to native and economic plants This is a valuable resource for scientists and policy makers
