Space-Time Geometries for Motion and Perception in the Brain and the Arts Tamar Flash, Alain Berthoz, 2021-01-04 This book is based on a two day symposium at the Paris Institute of Advanced Study titled space time geometries and movement in the brain and the arts It includes over 20 chapters written by the leading scientists and artists who presented their related research studies at the symposium and includes six sections the first three focus on space time geometries in perception action and memory while the last three focus on specific artistic domains drawing and painting dance music digital arts and robotics The book is accompanied by a dedicated webpage including related images and videos There is an ever growing interest in the topics covered by this book Space and time are of fundamental importance for our understanding of human perception action memory and cognition and are entities which are equally important in physics biology neuroscience and psychology Highly prominent scientists and mathematicians have expressed their belief that our bodies and minds shape the ways we perceive space and time and the physical laws we formulate Understanding how the brain perceives motion and

generates bodily movements is of great significance There is also growing interest in studying how space time and movement subserve artistic creations in different artistic modalities e g fine arts digital and performing arts and music This interest is inspired by the idea that artists make intuitive use of the principles and simplifying strategies used by the brain in movement generation and perception Building upon new understanding of the spatio temporal geometries subserving movement generation and perception by the brain we can start exploring how artists make use of such neuro geometrical and neuro dynamic representations in order to express artistic concepts and emotionally affect the human observers and listeners Scientists have also started formulating new ideas of how aesthetic judgements emerge from the principles and brain mechanisms subserving motor control and motion perception Covering novel and multidisciplinary topics this advanced book will be of interest to neuroscientists behavioral scientists artificial intelligence and robotics experts students and artists

Statistical Modeling With R Pablo Inchausti, 2023-01-16 To date statistics has tended to be neatly divided into two theoretical approaches or frameworks frequentist or classical and Bayesian Scientists typically choose the statistical framework to analyse their data depending on the nature and complexity of the problem and based on their personal views and prior training on probability and uncertainty Although textbooks and courses should reflect and anticipate this dual reality they rarely do so This accessible textbook explains discusses and applies both the frequentist and Bayesian theoretical frameworks to fit the different types of statistical models that allow an analysis of the types of data most commonly gathered by life scientists It presents the material in an informal approachable and progressive manner suitable for readers with only a basic knowledge of calculus and statistics Statistical Modeling with R is aimed at senior undergraduate and graduate students professional researchers and practitioners throughout the life sciences seeking to strengthen their understanding of quantitative methods and to apply them successfully to real world scenarios whether in the fields of ecology evolution environmental studies or computational biology
