Science SOL 4.2- Plants & Animals

Deliverable: "Students will explain how different processes and structures help plants grow and reproduce."

Students are expected to learn that: Students are expected to understand the processes and structures that help plants grow and reproduce.

Key Concepts:

Plants: Plants are living organisms that grow and reproduce. They have different parts that help them survive and grow. The main parts of a plant are the roots, stem, leaves, and flowers. The roots anchor the plant in the soil and absorb water and nutrients. The stem supports the leaves and flowers. The leaves are where the plant makes its food through photosynthesis. The flowers are where the plant reproduces.

Photosynthesis: Photosynthesis is the process by which plants use sunlight, water, and carbon dioxide to produce glucose (sugar) and oxygen. The equation for photosynthesis is: $6\text{CO}_2 + 6\text{H}_2\text{O} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$. The glucose is used by the plant for energy and growth, and the oxygen is released into the air.

Water Cycle: The water cycle is the continuous movement of water on, above, and below the surface of the Earth. It involves processes such as evaporation, condensation, precipitation, and runoff. Plants play a role in the water cycle by absorbing water from the soil and releasing it into the air through transpiration.

Plant Reproduction: Plants reproduce in two main ways: sexually and asexually. Sexual reproduction involves the fusion of male and female gametes to form a zygote, which then develops into a new plant. Asexual reproduction involves the production of new plants from a single parent plant without the fusion of gametes. Examples of asexual reproduction include runners, cuttings, and tubers.

Plant Adaptations: Plants have various adaptations that help them survive in their environment. Some plants have thick, waxy leaves to reduce water loss. Some plants have deep roots to access water and nutrients. Some plants have small, waxy leaves to reduce water loss in dry environments. Some plants have large, flat leaves to capture more sunlight. Some plants have thorns or spines to protect themselves from herbivores.

Plant Growth: Plants grow through a process called mitosis, which is the division of a cell into two daughter cells. This process allows the plant to increase in size and produce new cells. Plant growth is influenced by factors such as light, water, and nutrients. Plants also have a life cycle that includes germination, growth, reproduction, and death.
