Perry,2007-01-02 The Google Web Toolkit GWT is a nifty

framework that Java programmers can use to create Ajax applications The GWT allows you to create an Ajax application in your favorite IDE such as IntelliJ IDEA or Eclipse using paradigms and mechanisms similar to programming a Java Swing application After you code the application in Java the GWT s tools generate the JavaScript code the application needs You can also use typical Java project tools such as JUnit and Ant when creating GWT applications The GWT is a free download and you can freely distribute the client and server side code you create with the framework This shortcut explains how to get started with the GWT and then demonstrates how to create a simple Ajax application   *Pro Single Page Application Development* Gil Fink,Ido Flatow,SELA Group,2014-05-10 One of the most important and exciting trends in web development in recent years is the move towards single page applications or SPAs Instead of clicking through hyperlinks and waiting for each page to load the user loads a site once and all the interactivity is handled fluidly by a rich JavaScript front end If you come from a background in ASP NET development you ll be used to handling most interactions on the server side Pro Single Page Application Development will guide you through your transition to this powerful new application type The book starts in Part I by laying the groundwork for SPA development You ll master some JavaScript techniques that will come in useful later on and get to know the building blocks of a single page application including modules routing and MV frameworks In Part II you ll build the client for your application This is where the magic happens as the authors take you through the process step by step Backbone js is the ideal library for demonstrating SPA development in practice but you can apply the same principles with other frameworks in your future applications Part III takes you through the process of building the server side of your application using ASP NET Web API and hooking up the two parts of your application to create a working whole SPA development also comes with its own particular challenges including tracking history user interface performance and how to handle search engine optimization In the final chapters the authors guide you through some of these issues and advanced techniques and finish by showing you how to deploy your application As SPAs become the de facto standard of web application development the in depth Pro Single Page Application Development will be your one stop shop for creating fluid modern applications on the web   **Essential GWT** Federico Kereki,2010-07-28 With Google Web Toolkit Java developers can build sophisticated Rich Internet Applications RIAs and complete Web sites using the powerful IDEs and tools they already use Now with GWT 2 Google Web Toolkit has become even more useful Essential GWT shows how to use this latest version of GWT to create production solutions that combine superior style performance and interactivity with exceptional quality and maintainability Federico Kereki quickly reviews the basics and then introduces intermediate and advanced GWT skills covering issues ranging from organizing projects to compiling and deploying final code Throughout he focuses on best practice methodologies and design patterns For example you ll learn how to use the MVP model view presenter pattern to improve application design and support automated testing for agile development Kereki illuminates each concept with realistic code examples that help developers jump start their projects and get great results more quickly Working with the

latest versions of open source tools such as Eclipse Subversion Apache Tomcat and MySQL he demonstrates exactly how GWT fits into real Web development environments Coverage includes Using the Google Plugin for Eclipse and the GWT Shell Script Detecting and working with browsers and solving the problems they cause Building better user interfaces with the MVP pattern Using APIs for visualization mapping weather data and more Internationalizing and localizing GWT code Securing GWT applications with cryptography hashing and encryption Testing with JUnit Emma GWTTestCase Selenium and Mock Objects Deploying client only and client plus server GWT applications   **Pro Web 2.0 Application Development with GWT** Jeff Dwyer,2008-07-27 The main focus of Pro Web 2 0 Application Development with GWT is an analysis of a full fledged Web 2 0 application called GWT College Bound This book is for people who are looking to get beyond small proof of concept sample applications and want to see what the guts of a full fledged Google Web Toolkit application should look like

   Evaluation and comparison of Ajax Frameworks regarding applicability, productivity and technical limitations Lukas Ostermaier,2008-03-11 Inhaltsangabe Abstract For some years the Internet has been dominated by phrases like Web 2 0 and Ajax The catchword Web 2 0 which was originally established by O Reilly at the first Web 2 0 conference in October 2004 not only describes a new way of perception and usage of the internet e g social software like blogs wikis etc but also stands for more or less innovative techniques as for instance RSS or Ajax The latter is a combination of techniques that have been available since the late 1990s such as JavaScript asynchronous requests and XML However the term Ajax only exists since Jesse James Garret introduced it in his article in February 2005 Since then Ajax has experienced a real hype Google Mail Google Maps or Flickr just serve as examples for the mass of applications that have to attribute their success substantially to Ajax When it comes to web application development there has also been a lot of progress in the field of Ajax Ajax frameworks of all kinds massively gained popularity and flooded the development community From the biggest companies through to small development teams almost everyone has published his own Ajax framework or library in the last two years In the meantime there are far more than 150 different frameworks for various programming languages and diverse aims Because of this uncontrolled growth of frameworks it is quite difficult to say which of those is most suitable for a specific project There are two key questions that have to be considered in case of Ajax or Rich Internet Applications RIAs in general How can Ajax significantly increase the business value of an application and how can it be applied productively This thesis mainly focuses on the latter question by evaluating three Ajax frameworks of large companies with a strong background by means of an example application with respect to commercial applicability productivity performance as well as enhancement and adaptation possibilities Furthermore this work discusses the technical limitations and problems of Ajax and provides an outlook on future developments in this area As example application for the evaluation a web based tracking system for public transportation is implemented Each single vehicle is visualized on a street map according to its current position By the implementation of this application with each of the three chosen Ajax frameworks their applicability productivity and

performance is illustrated as well as
