Webster, Arnold S. Monto, Thomas J. Braciale, Robert A. Lamb, 2014-01-06 The Textbook of Influenza is a comprehensive resource covering all aspects of influenza from the genetic and molecular biology of the virus through to clinical aspects of the disease and the latest drug developments and treatments This new edition has been completely revised and reflects the integration of disciplines concerning the emergence evolution pathogenesis and control of influenza viruses in the field of human and veterinary public health Textbook of Influenza examines the lessons learnt from the latest pandemic and provides the current state of knowledge for many yet unresolved issues related to virus origin spread pathogenesis and disease severity to better prepare for future pandemics It covers the background to recent advances in influenza genomics and reverse genetics which have allowed the identification of virus virulence factors and the analysis and reconstruction of influenza viruses such as the 1918 Spanish flu strain This new edition is divided into eight key sections containing chapters co written by international experts from both the clinical and scientific communities covering Influenza Perspectives Structure and Replication Evolution and Ecology Epidemiology and Surveillance Immunology Vaccines and Vaccine

Development Clinical Aspects and Antivirals Public Health Textbook of Influenza is for all those working in the area of influenza including clinical and basic scientists immunologists molecular and structural virologists public health officials and global pandemic control planners **Influenza Virus Vaccines and Immunotherapies** Arun Kumar, Shakti Singh, 2016-03-15 Influenza virus infections lead to thousands of deaths worldwide annually and billions of dollars economic burden Despite continuing advances in our understanding of the immune evasion mechanism the disease remains one of the foremost threat for human being Traditional vaccines attenuated and inactivated mainly provide protection by inducing virus neutralizing antibodies targeting ever changing surface antigens Haemagultinin HA and Neuraminidase NA Due to genetic shift and immune selection pressure prevalence of circulating influenza virus subtypes changes every year Therefore mismatch between circulating strain and vaccine strain can critically affect the success rate of these conventional flu vaccines and requires continuous monitoring of circulating influenza virus subtypes and change in the vaccine formulations accordingly The collective limitations of existing flu vaccines urgently call for the development of a novel universal vaccines that might provide the required protective immunity to a range of influenza virus subtypes New approaches are being investigated mainly targeting conserved regions of flu proteins Some of these approaches include universally conserved epitopes of HA nucleoprotein NP capsid protein M1 and ion channel protein M2 that induced strong immune responses in animal models Some attention and progress appears to be focused on vaccines based on the M2 ectodomain M2e employing a variety of constructs adjuvants and delivery systems including M2e hepatitis B core antigen flagellin constructs and virus like particles VLP Animal studies with these M2e candidate vaccines demonstrated that these vaccine candidates can prevent severe illness and death but not infection which may pose difficulties in both the evaluation of clinical efficacy and approval by the regulatory authorities VLP vaccines appear to be promising but still are mostly limited to animal studies The discovery and development of new and improved vaccines have been greatly facilitated by the application of new technologies The use of nucleic acid based vaccines to combine the benefits of in situ expression of antigens with the safety of inactivated and subunit vaccines has been a key advancement Upon their discovery more than 20 years ago nucleic acid vaccines promised to be a safe and effective mean to mimic immunization with a live organism vaccine particularly for induction of T cell immunity In addition the manufacturing of nucleic acid based vaccines offered the potential to be relatively simple inexpensive and generic Reverse Vaccinology and in silico designing of vaccines are very innovative approaches and being considered as future of vaccines Furthermore various immuno therapeutic agents also being developed to treat and minimize immuno pathological damage in patients suffering from life threatening complications For the treatment of such pathological conditions various novel approaches such as administration of immune suppressive cytokines blocking co stimulatory signals or activating co inhibitory signal of T cell activation are being tested both in lab and clinics The Research Topic on influenza virus vaccine and therapeutics will give an insight in to the current status and future scope of these new innovative

approaches and technologies Moreover these new methods will also serve as a reference tool for the development of future vaccines against several other pathogens **Hedgehog Signaling Protocols** Jamila I. Horabin,2007-09-13 In both vertebrates and invertebrates Hedgehog signaling regulates the development of the tissues and structures of the body In addition many cancers and diseases arise as a result of misregulation of the pathway which makes it an incredibly important system to understand This volume examines various methods used in the analysis of the Hedgehog signaling pathway bringing together different lines of analyses into one accessible and comprehensive text This volume provides a single source for investigators presenting several different experimental approaches which are all varied and broad in nature as well as procedures for a variety of different model systems Researchers will find this volume to be an invaluable tool as they work towards deeper understanding of the underlying molecular events that the Hedgehog signaling pathway regulates

Reverse Genetics of RNA Viruses Daniel R. Pérez,2023-12-08 This second edition volume expands on the previous edition with new and updated chapters that highlight the latest methods and approaches for the manipulation of RNA viruses The chapters in this book explore the fundamental role in studying RNA viruses identifying markers of host range disease and transmission and aid readers with the further development of in silico computational biology tools and artificial intelligence algorithms that can help predict the emergence of certain pathogens Written in the highly successful Methods in Molecular Biology series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Cutting edge and comprehensive Reverse Genetics of RNA Viruses Methods and Protocols Second Edition is a valuable resource for researchers who are interested in learning more about this developing field **Exocytosis and Endocytosis** Andrei I.

Ivanov,2008 In this book skilled experts provide the most up to date step by step laboratory protocols for examining molecular machinery and biological functions of exocytosis and endocytosis in vitro and in vivo The book is insightful to both newcomers and seasoned professionals It offers a unique and highly practical guide to versatile laboratory tools developed to study various aspects of intracellular vesicle trafficking in simple model systems and living organisms *Gene Function Analysis* Michael F. Ochs,2007-08-23 With the advent of high throughput technologies following completion of the human genome project and similar projects the number of genes of interest has expanded and the traditional methods for gene function analysis cannot achieve the throughput necessary for large scale exploration This book brings together a number of recently developed techniques for looking at gene function including computational biochemical and biological methods and protocols

The Routledge Handbook of Paleopathology Anne L. Grauer,2022-12-30 The Routledge Handbook of Paleopathology provides readers with an overview of the study of ancient disease The volume begins by exploring current methods and techniques employed by paleopathologists as means to highlight the range of data that can be generated the types of questions that can be methodologically addressed our current limitations and goals for the future Building on these

foundations the volume introduces a range of diseases and conditions that have been noted in the fossil archaeological and historical record offering readers a foundational understanding of pathological conditions along with their potential etiologies. Importantly an evolutionary and highly contextualized assessment of diseases and conditions will be presented in order to demonstrate the need for adopting anthropological biological and clinical approaches when exploring the past and interpreting the modern world. The volume concludes with the contextualization of paleopathological research. Chapters highlight ways in which analyses of health and disease in skeletal and mummified remains reflect political and social constructs of the past and present. Health and disease are tackled within evolutionary perspectives across deep time and generationally and the nuanced interplay between disease and behavior is explored. The volume will be indispensable for archaeologists bioarchaeologists and historians and those in medical fields as it reflects current scholarship within paleopathology and the field's impact on our understanding of health and disease in the past the present and implications for our future.

Insights in Emerging or Re-emerging Zoonoses Javier Caballero Gómez, Mustafa Altindis, Santiago Mirazo, Barbara Moroni, 2024-07-31 More than sixty percent of emerging infectious diseases that affect humans are caused by zoonotic pathogens. Over the last two centuries there have been many examples of zoonotic microorganisms that have caused important epidemics or pandemics around the world. However currently zoonotic emerging infectious diseases are still or are even a higher threat for global health including animal public and environmental health probably due to factors such as globalization the increasing temperature of global health intensive agriculture or industrialization have favored the emergence or re-emerging of these diseases among many others. Today more than ever the high interconnection of human animals and the environment highlights the need of a One Health approach to understand aspects related with the transmission or control of these emerging pathogens. This Research Topic aims to provide a collection of comprehensive articles of different areas of interest such as epidemiology diagnosis and pathology in infections caused by emerging or re-emerging zoonotic pathogens including viruses parasites and bacteria in humans domestic animals and or wildlife. The major areas to be included regarding emerging or re-emerging zoonoses might be Epidemiology including research on host range transmission genetic diversity prevalence and distribution. Pathology including clinical signs and lesions caused by the infection of emerging zoonotic pathogens. Diagnosis including novel techniques of indirect or direct assays as well as novel approaches in the diagnosis of these pathogens. Control of emerging zoonoses.

Insecurity and Emerging Biotechnology Brett Edwards, 2019-02-05 This book examines how emergent trends in innovation and its governance are raising new and old questions about how to control technology. It develops a new framework for understanding how emergent fields of science and technology emerge as security concerns and the key challenges these fields pose from a global security perspective. The study focuses on the politics which have surrounded the emergent field of Synthetic Biology a field which has become emblematic of both the potentials and limits of more preemptive approaches to governance. This highly

accessible work will be of interest to both scholars and practitioners working on the ethical responsibilities of innovators and the assessment of emergent technology as well as the global governance of weapons

Protein Supersecondary Structures Alexander E. Dangerous Science Daniel J. Rozell, 2020-02-04 The public is generally enthusiastic about the latest science and technology but sometimes research threatens the physical safety or ethical norms of society When this happens scientists and engineers can find themselves unprepared in the midst of an intense science policy debate In the absence of convincing evidence technological optimists and skeptics struggle to find common values on which to build consensus The best way to avoid these situations is to sidestep the instigating controversy by using a broad risk benefit assessment as a risk exploration tool to help scientists and engineers design experiments and technologies that accomplish intended goals while avoiding physical or moral dangers Dangerous Science explores the intersection of science policy and risk analysis to detail failures in current science policy practices and what can be done to help minimize the negative impacts of science and technology on society
