New Perspectives on Technology, Values, and Ethics Wenceslao J. Gonzalez, 2015-10-08 This book focuses on a key issue today: the role of values in technology, with special emphasis on ethical values. This topic involves the analysis of internal values in technology as they affect objectives, processes, and outcomes, and the study of external values in technology: social, cultural, economic, ecological, etc. These values, internal and external, are crucial to the decision-making of engineers. In addition, they have increasing relevance for citizens concerned with the present and future state of technology, which gives society a leading position in technological issues. The book follows three main lines of research: 1) new perspectives on technology, values, and ethics; 2) rationality and responsibility in technology; and 3) technology and risks. This volume analyzes the two main sides involved here: the theoretical basis for the role of values in technology and a practical discussion on how to implement them in our society. Thus, the book is of interest for philosophers, engineers, academics of different fields, and policy makers. The style used lends itself to a broad audience.

Information and Communications Technology in Romania - Comparative Analysis with the EU, Social Impact, Challenges and Opportunities, Future Directions Nicolae Sfetcu, 2024-11-21 The modern global technological landscape is shaped by rapid advances and interconnectivity, leading to a complex ecosystem of innovation, competition, and collaboration. Significant developments are being seen in artificial intelligence, telecommunications, biotechnology, and energy technologies. Digitalization is redefining industries such as healthcare, transport, and finance, while cross-border data flows and 5G infrastructure are accelerating global connectivity. Key players such as the United States, China, and Japan are investing heavily in research and development, pushing the capabilities of AI and quantum computing further. These nations have adopted strategic initiatives to increase their technological self-confidence and ensure that their companies remain at the forefront of innovation. The European Union is positioned as a distinct player in the global technological landscape, aiming to stimulate innovation while ensuring trust, privacy, and sustainability. By leveraging its regulatory power, investing in digital infrastructure, and increasing collaboration between Member States, the EU is seeking to increase its strategic autonomy and competitiveness in the face of rapid technological change. Romania has seen significant development in its technology sector over the past two decades. Driven by a combination of government support, a well-educated workforce, and strategic positioning within the European Union, Romania is increasingly making its mark on the technology scene. This study provides an overview of current global technology trends and the state of technology resources in the European Union and in Romania, in particular, analyzing the strengths and weaknesses of the sector and highlighting the opportunities and challenges ahead. Enabling Enterprise Transformation Nagy K. Hanna, 2009-12-11 Private enterprises in advanced economies have been learning to use information and communication technology (ICT) to innovate and transform their processes, products, services, and business models, significantly improving productivity and competitiveness. Moreover, the ICT industry itself has become a major source of job creation and a contributor to economic growth and business transformation. A key question today is whether and how developing countries can learn to benefit from the ICT revolution and what roles the government and private sector can play. Already, a number of developing countries have been inspired by the example of India and China and are now seeking to jump on the outsourcing bandwagon. Nevertheless, with few exceptions in the developing world, little attention has been paid by policymakers and

practitioners to invest systematically and proactively in ICT enabled growth poverty reduction and grassroots innovation Most communities and small and medium sized enterprises in developing countries for example face multiple constraints to adopting and leveraging this general purpose technology and lack the capabilities for maximizing its potential In Enabling Enterprise Transformation Nagy Hanna draws on his rich experience of over 35 years at the World Bank and other aid agencies as a development strategist and ICT policy expert the most current research and best practices from around the world to provide practical tools for promoting economic and social transformation through ICT He assesses various initiatives to develop and diffuse ICT such as innovation funds incubators parks public private partnerships and comprehensive promotion programs He argues for the strategic options now open for developing countries to participate in ICT production to deploy ICT to transform industries and services and to leverage ICT as a new national infrastructure for improving the business environment and enhancing the competitiveness of the whole economy The challenge for leaders in developing countries is to create such social and institutional dynamics for learning about ICT use and adaptation at many levels Lessons gained so far from programs to build these social learning and innovation capabilities at the institutional and grassroots levels should be shared among developing countries and a dialogue among business leaders policymakers development agencies educational institutions and the general citizenry must be advanced
