Strategic ICT Planning in Pathology Markus Belkin, Brian Corbitt, Nilmini Wickramasinghe, 2012-08-24. There is little doubt that information technology is a major force in transforming healthcare systems. Physicians need to have considerable patient data at hand even if diagnosis and treatment are relatively straightforward. But data are only as useful as ICT information communication technology systems make them. Inefficient handling of data can quickly lead to chaos and possibly to fatalities. Strategic ICT Planning in Pathology illuminates these problems as well as their potential solutions based on a unique body of research from Australia. Focusing on core strategic factors such as laboratory information systems capability and effectiveness, business IT alignment, strategic spending, research and education and end user involvement, the book explains why pathology labs lag behind other hospital departments. Survey and focus group findings pinpoint the importance of Strategic Information System Planning (SISP) and its relationship to quality service delivery and an improved bottom line. Among the topics covered: Approaches to SISP and IS effectiveness measurement; The OpenLabs project and pathology practice; Development of a framework for SISP; Focus groups: the view from the hospital laboratory, the private pathology lab and the experts; Key findings and their implications for strategy planning and business outcomes; Future research directions including reverse SISP. Strategic ICT Planning in Pathology is a go to resource for healthcare administrators and researchers in healthcare management, health policy and health services research interested in troubleshooting systems, conducting surveys on IS or better understanding how quality ICT works.
