**Information technology project managers' competencies: An analysis of performance and personal competencies** Carl Marnewick, Wikus Erasmus, Nazeer Joseph, 2016-12-31 The purpose of this book is to shed light on the performance and personal competencies of information technology IT project managers in South Africa. Predictive models are built to determine what project managers consider the crucial competencies they should possess to deliver an IT project successfully. This investigation takes place in the context of poor IT project success rates globally and in particular in South Africa. This novel research seeks to extend the debate on project success beyond what constitutes success or failure but seeks to find clarity in what IT project managers believe are the essential competencies in practice. This quantitative research gathered data by way of an online survey based on literature regarding the Project Management Competency Development Framework PMCDF. The population consisted of IT project managers in South Africa. Four hundred and two respondents chose to share their insights. Through the use of descriptive and multivariate statistics, major competency factors were identified. These factors were used in structural equation modelling to build various validated predictive models. This book contributes to the current body of knowledge by uncovering the competencies that IT project managers consider themselves competent in. The structural equation models indicated predictors of perceived competence by IT project managers and where these perceived competencies differ from literature. Twelve managerial implications are highlighted in the final chapter that seek to draw the myriad threads together into a coherent summary. It is apparent that IT project managers do not consider the PMCDF important in its entirety but instead choose to focus on certain competencies. Information Technology Project Management Bennet Lientz, 2017-09-16 Many of the project management methods and techniques of the past are still being used today even though the technology management and environment have changed. Information Technology Project Management explores the need to employ a modern project management approach to reflect today's environment. Focusing on IT projects, Lientz provides a comprehensive examination of the project management process from
