Conceptual Questions

- 2.17. Velocity and speed are defined differently. The magnitude of average velocity and average speed are the same only when the direction of movement does not change. If the direction changes during movement, it is known that the net displacement is smaller than the net distance. Using the definition of average velocity and speed, it can be said that the magnitude of average velocity is less than the average speed when the direction changes during movement. Here, only Christine changes direction during her movement. Therefore, only Christine has a magnitude of average velocity which is smaller than her average speed.
- 2.18. The acceleration due to gravity is always pointing downward to the center of the Earth.

It can be seen that the direction of velocity is opposite to the direction of acceleration when the ball is in flight upward. The direction of velocity is the same as the direction of acceleration when the ball is in flight downward.

- 2.19. The car, before the brakes are applied, has a constant velocity, v_0 , and zero acceleration. After the brakes are applied, the acceleration is constant and in the direction opposite to the velocity. In velocity versus time and acceleration versus time graphs, the motion is described in the figures below.

- 2.20. There are two cars, car 1 and car 2. The decelerations are $a_1 = 2a_2 = -a_0$ after applying the brakes. Before applying the brakes, the velocities of both cars are the same, $v_1 = v_2 = v_0$. When the cars have completely stopped, the final velocities are zero, $v_1 = 0$. $v_1 = v_0 + at = 0 \Rightarrow t = -\frac{v_0}{a}$. Therefore, the ratio of time taken

to stop is Ratio = $\frac{\text{time of car 1}}{\text{time of car 2}} = \frac{-v_0 / -a_0}{-v_0 / \left(-\frac{1}{2}a_0\right)} = \frac{1}{2}$. So the ratio is one half.

Crystal Growth in Science and Technology H. Arend, J. Hulliger, 2012-12-06 Science and art of crystal growth represent an interdisciplinary activity based on fundamental principles of physics chemistry and crystallography Crystal growth has contributed over the years essentially to a widening of knowledge in its basic disciplines and has penetrated practically into all fields of experimental natural sciences It has acted more over in a steadily increasing manner as a link between science and technology as can be seen best for example from the achievements in modern microelectronics The aim of the course Crystal Growth in Science and Technology being to stress the interdisciplinary character of the subject selected fundamental principles are reviewed in the following contributions and cross links between basic and applied aspects are illustrated It is a very well known fact that the intensive development of crystal growth has led to a progressive narrowing of interests in highly specialized directions which is in particular harmful to young research scientists The organizers of the course did sincerely hope that the program would help to broaden up the horizon of the participants It was equally their wish to contribute within the traditional spirit of the school of crystallography in Erice to the promotion of mutual understanding personal friendship and future collaboration between all those who were present at the school **The United States Catalog** Mary Burnham, Carol Hurd, 1928
