CHEMICAL KINETICS CHEAT SHEET

DEFINITIONS: The study of the rates of chemical reactions is called chemical kinetics. It is concerned with the rates of chemical reactions and the factors that affect them.

Rate of Reaction: The rate of a chemical reaction is the change in concentration of a reactant or product per unit time.

Order of Reaction: The order of a chemical reaction is the sum of the powers of the concentration terms in the rate equation.

Half-life: The half-life of a reaction is the time taken for the concentration of a reactant to fall to half its initial value.

Rate Equation: The rate equation for a chemical reaction is an equation that relates the rate of reaction to the concentrations of the reactants.

Rate Constant: The rate constant is a proportionality constant that appears in the rate equation.

Activation Energy: The activation energy of a chemical reaction is the minimum energy that must be supplied to the reactants for the reaction to occur.

Reaction Orders			
Order	Description	Rate Equation	Half-life
Zero order	Rate is independent of the concentration of reactants	$\text{Rate} = k$	$t_{1/2} = \frac{[\text{A}]_0}{2k}$
First order	Rate is proportional to the concentration of one reactant	$\text{Rate} = k[\text{A}]$	$t_{1/2} = \frac{\ln 2}{k}$
Second order	Rate is proportional to the square of the concentration of one reactant or to the product of the concentrations of two reactants	$\text{Rate} = k[\text{A}]^2$ or $\text{Rate} = k[\text{A}][\text{B}]$	$t_{1/2} = \frac{1}{k[\text{A}]_0}$

Rate of Reaction

Rate of reaction is the change in concentration of a reactant or product per unit time.

Rate of reaction is measured by the change in concentration of a reactant or product over a given time interval.

Rate Equation

The rate equation for a chemical reaction is an equation that relates the rate of reaction to the concentrations of the reactants.

The rate equation for a zero-order reaction is $\text{Rate} = k$.

The rate equation for a first-order reaction is $\text{Rate} = k[\text{A}]$.

The rate equation for a second-order reaction is $\text{Rate} = k[\text{A}]^2$ or $\text{Rate} = k[\text{A}][\text{B}]$.

Half-life

The half-life of a reaction is the time taken for the concentration of a reactant to fall to half its initial value.

The half-life of a zero-order reaction is $t_{1/2} = \frac{[\text{A}]_0}{2k}$.

The half-life of a first-order reaction is $t_{1/2} = \frac{\ln 2}{k}$.

The half-life of a second-order reaction is $t_{1/2} = \frac{1}{k[\text{A}]_0}$.

Pharmacokinetic Principles of Dosing Adjustments Ronald D. Schoenwald, 2023-01-27 This book has evolved over the last twenty years from a cumulative effort to develop a professional course in pharmacokinetics that would assist future practitioners in therapeutic decision making As practicing pharmacists become more involved with patient advising it becomes apparent that clinicians will be required to make dosing adjustments for certain drugs This will become increasingly more likely as pharmacy practitioners have access to patient information that requires careful attention to dose and dosing interval which in turn correlates to various pharmacokinetic parameters such as half life and the volume of distribution of drugs Although many handbooks are available on this subject they do not devote more than a brief chapter to the concepts behind the dosing adjustment approach Pharmacokinetic Principles of Dosing Adjustments provides the concepts used to formulate approaches Equations that appear in various chapters are developed not through lengthy derivations but by more of an intuitive approach The equations are presented in their conceptual form rather than a separate convenient form applicable to each clinic situation This method is used to demonstrate how you can apply the initial conditions to the properties of the drug patient and or route of administration rather than memorizing each variation of the basic equation The author defines pertinent pharmacokinetic terms as well as kinetic processes and classical modeling relevant to dosing adjustments Examples are included within each chapter that emphasize an understanding of the concepts Pharmacokinetic Principles of Dosing Adjustments was written for practitioners who operate in a setting that requires careful consideration to dosing parameters and in particular with patients that require constant monitoring of therapeutic outcomes including dosing adjustments Based on the introductory course in pharmacokinetics taught by Dr Schoenwald for the past twenty years this book is intended as a review and resource for practicing pharmacists
