Manzanal, A.O. Sfriso, 2015-12-11 The work of geotechnical engineers contributes to the creation of safe economic and pleasant spaces to live work and relax all over the world. Advances are constantly being made and the expertise of the profession becomes ever more important with the increased pressure on space and resources. This book presents the proceedings of the 15th Pan American Conference on Soil Mechanics and Geotechnical Engineering XV PCSMGE held in Buenos Aires, Argentina, in November 2015. This conference held every four years is an important opportunity for international experts, researchers, academics, professionals, and geo engineering companies to meet and exchange ideas and research findings in the areas of soil mechanics, rock mechanics, and their applications in civil, mining, and environmental engineering. The articles are divided into nine sections: transportation geotechnics, in situ testing, geo engineering for energy and sustainability, numerical modeling in geotechnics, foundations and ground improvement, unsaturated soil behavior, embankments, dams, and tailings, excavations and tunnels, and geo risks, and cover a wide spectrum of issues from fundamentals to applications in geotechnics. This book will undoubtedly represent an essential reference for academics, researchers, and practitioners in the field of soil mechanics and geotechnical engineering. In this proceedings, approximately 65% of the contributions are in English and 35% of the contributions are in Spanish or Portuguese. *Fabrication of*

Complex Optical Components Ekkard Brinksmeier, Olthmann Riemer, Ralf M. Gläbe, 2012-09-13 High quality optical components for consumer products made of glass and plastic are mostly fabricated by replication. This highly developed production technology requires several consecutive well matched processing steps called a process chain covering all steps from mold design, advanced machining, and coating of molds up to the actual replication and final precision measurement of the quality of the optical components. Current market demands for leading edge optical applications require high precision and cost effective parts in large volumes. For meeting these demands, it is necessary to develop high quality process chains and moreover to crosslink all demands and interdependencies within these process chains. The Transregional Collaborative Research Center Process chains for the replication of complex optical elements at Bremen, Aachen, and Stillwater worked extensively and thoroughly in this field from 2001 to 2012. This volume will present the latest scientific results for the complete process chain, giving a profound insight into present day high tech production.
