 Carroll, 2014-01-27 University teaching and learning has never been more innovative than it is now This has been enabled by
 a better contemporary understanding of teaching and learning Instructors now present situated projects and practices to
 their students not just foundational principles Lectures and structured practice are now often replaced by engaging and
 constructivist learning activities that leverage what students know about think about and care about Teaching innovation has
 also been enabled by online learning in the classroom beyond the classroom and beyond the campus Learning online is
 perhaps not the panacea sometimes asserted but it is a disruptively rich and expanding set of tools and techniques that can
 facilitate engaging and constructivist learning activities It is becoming the new normal in university teaching and learning
 The opportunity and the need for innovation in teaching and learning are together keenest in information technology itself
 Computer and Information Science faculty and students are immersed in innovation The subject matter of these disciplines
 changes from one year to the next courses and curricula are in constant flux And indeed each wave of disciplinary innovation
 is assimilated into technology tools and infrastructures for teaching new and emerging concepts and techniques Innovative
 Practices in Teaching Information Sciences and Technology Experience Reports and Reflections describes a set of innovative
 teaching practices from the faculty of Information Sciences and Technology at Pennsylvania State University Each chapter is
 a personal essay describing practices implemented by one or two faculty that challenge assumptions and push beyond
 standard practice at the individual faculty and classroom level These are innovations that instructors elsewhere may find
 directly accessible and adaptable Taken as a set this book is a case study of teaching innovation as a part of faculty culture
 Innovation is not optional in information technology it inheres in both the disciplinary subject matter and in teaching But it is
 an option for instructors to collectively embrace innovation as a faculty The chapters in this book taken together embody this
 option and provide a partial model to faculties for reflecting on and refining their own collective culture of teaching

Handbook of Phenomenology and Cognitive Science Daniel Schmicking,Shaun Gallagher,2009-12-16 This volume explores the essential issues involved in bringing phenomenology together with the cognitive sciences and provides some examples of research located at the intersection of these disciplines The topics addressed here cover a lot of ground including questions about naturalizing phenomenology the precise methods of

phenomenology and how they can be used in the empirical cognitive sciences specific analyses of perception attention emotion imagination embodied movement action and agency representation and cognition inters jectivity language and metaphor In addition there are chapters that focus on empirical experiments involving psychophysics perception and neuro and psychopathologies The idea that phenomenology understood as a philosophical approach taken by thinkers like Husserl Heidegger Sartre Merleau Ponty and others can offer a positive contribution to the cognitive sciences is a relatively recent idea Prior to the 1990s phenomenology was employed in a critique of the first wave of cognitivist and computational approaches to the mind see Dreyfus 1972 What some consider a second wave in cognitive science with emphasis on connectionism and neuroscience opened up possibilities for phenomenological intervention in a more positive way resulting in proposals like neurophenomenology Varela 1996 Thus brain imaging technologies can turn to phenomenological insights to guide experimentation see e g Jack and Roepstorff 2003 Gallagher and Zahavi 2008

Right Hand, Left Hand I. C. McManus, 2002 McManus considers evidence from anthropology particle physics the history of medicine and the notebooks of Leonardo to answer questions like Why are most people right handed Why does European writing go from left to right while Arabic and Hebrew go from right to left And how do we know that Jack the Ripper was left handed
