Text: Plants use sunlight, water, and carbon dioxide to create oxygen and energy in the form of sugar. This process is called photosynthesis. The roots of the plant absorb water from the soil. The leaves of the plant use sunlight and carbon dioxide to create oxygen and sugar. The oxygen is released into the air, and the sugar is used by the plant for energy.

Diagram: A diagram of a plant showing the process of respiration. Labels include: Oxygen, Sugar, Carbon Dioxide, and Water.

Text: Plants use oxygen and energy in the form of sugar to create carbon dioxide and water. This process is called respiration. The roots of the plant release carbon dioxide into the soil. The leaves of the plant release water vapor into the air. The carbon dioxide and water vapor are then used by the plant for photosynthesis.

Diagram: A diagram of a plant showing the water cycle. Labels include: Sun, Clouds, Rain, Ground, and Plant.

Text: The water cycle is the process by which water moves through the environment. The sun heats the water in the oceans, and the water evaporates into the air. The water vapor then condenses into clouds. When the clouds become heavy, they release rain. The rain falls on the ground, and some of it soaks into the soil. The plants absorb the water from the soil, and they use it for photosynthesis. The water that is not absorbed by the plants runs off into the oceans, and the cycle begins again.
