Modeling Practice and Mechanism Design of Green Energy Systems towards Sustainable Development Jianli Zhou,Lirong Liu, Meiheriayi Mutailipu,Shuai Geng,Shenbo Yang,Ting Zhang,2025-03-12 The sustainable development of energy has become a global concern. The energy system as an extremely important module for production conversion transmission and supply in the energy industry is facing pressure from deep decarbonization and green transformation. The application of wind power photovoltaic hydrogen energy power to gas P2G technology carbon capture utilization and storage CCUS technology will help the energy system achieve the Sustainable Development Goals. Hydrogen energy will become a bridge for various energy conversion promoting the high speed flow of green energy. Therefore modeling practice and mechanism design for green energy systems will become a key area of academic research. The full utilization and consumption of renewable energy generation e.g. wind and photovoltaic still face difficulties and challenges especially the problem of full consumption. The development and layout of multi energy complementarity coupling and interaction and collaborative integrated energy systems can effectively solve the above problems. Therefore there is an urgent need to study the mechanism planning and design optimized operation development mode carbon emission reduction energy policies and trading mechanisms of integrated energy systems coupled with renewable energy generation and hydrogen energy to promote its further development and help achieve a clean and sustainable future. This field will integrate the knowledge and methodology from energy science power electronics management science and economics.
