Information Retrieval In Digital Environments:

Information Retrieval in Digital Environments Jerome Dinet, 2014-08-08 Information retrieval is a central and essential activity. It is indeed difficult to find a human activity that does not need to retrieve information in an environment which is often increasingly digital, moving and navigating, learning, having fun, communicating, informing, making a decision, etc. Most human activities are intimately linked to our ability to search quickly and effectively for relevant information; the stakes are sometimes extremely important: passing an exam, voting, finding a job, remaining autonomous, being socially connected, developing a critical spirit, or simply surviving. The author of this book presents a summary of work undertaken over several years relative to the behaviors and cognitive processes involved in information retrieval in digital environments. He presents several examples of theoretical models and studies to better understand the difficulties, behaviors, and strategies of individuals searching for information in digital environments. Interactive Information Retrieval in Digital Environments Xie, Iris, 2008-04-30 This book includes the integration of existing frameworks on user-oriented information retrieval systems across multiple disciplines, the comprehensive review of empirical studies of interactive information retrieval systems for different types of users, tasks, and subtasks, and the discussion of how to evaluate interactive information retrieval systems. Provided by publisher. **Information Retrieval in Digital Environments** Jérôme Dinet, 2014 *Information Retrieval in Digital Environments 2nd Edition* Dinet, 2020-01-20 *Information Seeking Behavior and Challenges in Digital Libraries* Tella, Adeyinka, 2016-07-15 Digital libraries have been established worldwide to make information more readily available, and this innovation has changed the way information seekers interact with the data they are collecting. Faced with decentralized, heterogeneous sources, these users must be familiarized with high-level search activities in order to sift through large amounts of data. *Information Seeking Behavior and Challenges in Digital Libraries* addresses the problems of usability and search optimization in digital libraries. With topics addressing all aspects of information seeking activity, the research found in this book provides insight into library user experiences and human-computer interaction when searching online databases of all types. This book addresses the challenges faced by professionals in information management, librarians, developers, students of library science, and policy makers. Human Attention in Digital Environments Claudia Roda, 2011-02-03 Digital systems such as phones, computers, and PDAs place continuous demands on our cognitive and perceptual systems. They offer information and interaction opportunities well above our processing abilities and often interrupt our activity. Appropriate allocation of attention is one of the key factors determining the success of creative activities, learning, collaboration, and many other human pursuits. This book presents research related to human attention in digital environments. Original contributions by leading researchers cover the conceptual framework of research aimed at modelling and supporting human attentional processes, the theoretical and software tools currently available, and various application areas. The authors explore the idea that attention has a key role to play in the design of future technology and discuss how such technology may continue.
