Handbook of Antennas in Wireless Communications Lal Chand Godara, 2018-10-03 The move toward worldwide wireless communications continues at a remarkable pace and the antenna element of the technology is crucial to its success With contributions from more than 30 international experts the Handbook of Antennas in Wireless Communications brings together all of the latest research and results to provide engineering professionals and students with a one stop reference on the theory technologies and applications for indoor hand held mobile and satellite systems Beginning with an introduction to wireless communications systems it offers an in depth treatment of propagation prediction and fading channels It then explores antenna technology with discussion of antenna design methods and the various antennas in current use or development for base stations hand held devices satellite communications and shaping beams The discussions then move to

smart antennas and phased array technology including details on array theory and beamforming techniques Space diversity direction of arrival estimation source tracking and blind source separation methods are addressed as are the implementation of smart antennas and the results of field trials of systems using smart antennas implemented Finally the hot media topic of the safety of mobile phones receives due attention including details of how the human body interacts with the electromagnetic fields of these devices Its logical development and extensive range of diagrams figures and photographs make this handbook easy to follow and provide a clear understanding of design techniques and the performance of finished products Its unique comprehensive coverage written by top experts in their fields promises to make the Handbook of Antennas in Wireless Communications the standard reference for the field

Satellite Regulation in Europe Stéphan Le Goueff, 2021-10-25 Commercial satellite activities have undergone enormous growth in the last decades and so has the complexity of the legal framework within which these activities have to be carried out Because of the international character of satellite activities this legal framework has often been established on an international or regional level through institutions such as the European Union the International Telecommunications Union the World Trade Organisation and the European Conference of Postal and Telecommunications Administrations It is not an easy task to obtain a complete picture of this legal framework For this reason it was considered opportune to assemble all relevant legal texts and materials established by these institutions into one book As telecommunications is currently the most important commercial application of satellites it should come as no surprise to anyone that the main part of the book is dedicated to this application simply because of the fact that the legal framework is furthest developed However relevant texts and materials for the three other commercial satellite activities broadcasting remote sensing and navigation have also been included This book is a very valuable tool for all those involved in the European satellite business or for those who want to get involved in it whether they are lawyers or non lawyers everyone is affected by the laws and regulations governing this field and everyone should be aware of the limitations these laws and regulations might impose
