Manual of Extracorporeal Membrane Oxygenation (ECMO) in the ICU Poonam Malhotra Kapoor, 2013-09-30

Extracorporeal Membrane Oxygenation ECMO is a procedure that uses a machine to take over the work of the lungs and sometimes the heart. The system provides heart lung bypass support using a pump to circulate blood through an artificial lung back into the bloodstream providing enough oxygen to the patient whilst allowing time for the lungs and heart to rest or heal during or after serious illness. ECMO is often used for babies but can also be used for children and adults. Medline Plus

The techniques for ECMO require professionals from multidisciplinary background to be involved in the procedure. This practical manual is a comprehensive guide to ECMO. Divided into eleven sections the book begins with an introduction to the procedure and equipment. The following sections provide step by step discussion on initiation maintenance of support and monitoring and techniques of ECMO for different case scenarios. The final sections present multiple choice questions for self assessment and extensive appendices.

Inhomogeneous Optical Waveguides A. Ghatak,2013-03-09 The propagation of electromagnetic waves in square law media i e media characterized by a quadratic spatial variation of the dielectric constant has been a favorite subject of

investigation in electromagnetic theory. However, with the recent fabrication of glass fibers with a quadratic radial variation of the dielectric constant and the application of such fibers to optical imaging and communications, this subject has also assumed practical importance. Comparison of experimental results on propagation resolution and pulse distortion in such inhomogeneous waveguides with theory has put the field on a sound base and spurred further work. The present book aims at presenting a unified view of important aspects of our knowledge of inhomogeneous optical waveguides. A brief discussion of homogeneous dielectric waveguides is unavoidable since it forms a basis for the appreciation of inhomogeneous waveguides. A short course based on some chapters of this book was offered to graduate students at IIT Delhi and was well received. We consider that despite the unavoidable mathematical nature of the present book, the comparison of experimental results with theory throughout and the description of fabrication technology in Appendices A and B should make its appeal universal. The authors are grateful to Dr K Thyagarajan for writing most of Chapter 9 and to their colleagues Dr I C Goyal, Dr B P Pal, and Dr A
