## **Gpr Remote Sensing In Archaeology Geotechnologies And The Environment:**

**GPR Remote Sensing in Archaeology** Dean Goodman, Salvatore Piro, 2013-03-19 GPR Remote Sensing in Archaeology provides a complete description of the processes needed to take raw GPR data all the way to the construction of subsurface images The book provides an introduction to the theory of GPR by using a simulator that shows how radar profiles across simple model structures look and provides many examples so that the complexity of radar signatures can be understood It continues with a review of the necessary radargram signal processes needed along with examples The most comprehensive methodology to construct subsurface images from either coarsely spaced data using interpolation or from dense data from multi channel equipment and 3D volume generation is presented advanced imaging solutions such as overlay analysis are introduced and numerous worldwide site case histories are shown The authors present their studies in a way that most technical and non technical users of the equipment will find essentials for implementing in their own subsurface investigations

Ground-penetrating Radar for Geoarchaeology Lawrence B. Conyers, 2016-05-18 There has long been a strong collaboration between geologists and archaeologists and the sub field of geoarchaeology is well developed as a discipline in its own right This book now bridges the gap between those fields and the geophysical technique of ground penetrating radar GPR which allows for three dimensional analysis of the ground to visualize both geological and archaeological materials This method has the ability to produce images of the ground that display complex packages of materials and allows researchers to integrate sedimentary units soils and associated archaeological features in ways not possible using standard excavation techniques The ability of GPR to visualize all these buried units can help archaeologists place ancient people within the landscapes and environments of their time and understand their burial and preservation phenomena in three dimensions Readership Advanced students in archaeology and geoarchaeology as well as practicing archaeologists with an interest in GPS techniques Electromagnetic Methods in Geophysics Fabio Giannino, Giovanni Leucci, 2021-08-31 Discover the utility of four popular electromagnetic geophysical techniques In GeoRadar FDEM TDEM and AEM Methods accomplished

researchers Fabio Giannino and Giovanni Leucci deliver an in depth exploration of the theory and application of four different electromagnetic geophysical techniques ground penetrating radar the frequency domain electromagnetic method the time domain electromagnetic method and the airborne electromagnetic method The authors offer a full description of each technique as they relate to the economics planning and logistics of deploying each of them on site The book also discusses the potential output of each method and how it can be combined with other sources of below and above ground information to create a digitized common point cloud containing a wide variety of data Giannino and Leucci rely on 25 years of professional experience in over 40 countries around the world to provide readers with a fulsome description of the optimal use of GPR FDEM TDEM and AEM demonstrating their flexibility and applicability to a wide variety of use cases Readers will also benefit from the inclusion of A thorough introduction to electromagnetic theory including the operative principles and theory of ground penetrating radar GPR and the frequency domain electromagnetic method FDEM An exploration of hardware architecture and surveying including GPR FDEM time domain electromagnetic method TDEM and airborne electromagnetic AEM surveying A collection of case studies including a multiple geophysical archaeological GPR survey in Turkey and a UXO search in a building area in Italy using FDEM li Discussions of planning and mobilizing a campaign the shipment and clearance of survey equipment and managing the operative aspects of field activity Perfect for forensic and archaeological geophysicists GeoRadar FDEM TDEM and AEM Methods will also earn a place in the libraries of anyone seeking a one stop reference for the planning and deployment of GDR FDEM TDEM and AEM surveying techniques

*Recent Advances in GPR Imaging* Mercedes Solla,Susana Lagüela,2019-11-18 The Special Issue SI Recent Advances in GPR Imaging offers an up to date overview of state of the art research activities dealing with the development of Ground Penetrating Radar GPR technology and its recent advances in imaging in the different fields of application In fact the advances experimented with over the last few decades with regard to the appearance of new GPR systems and the need to manage large amounts of data suggest an increasing interest in the development of new signal processing algorithms and modeling as well as in the use of three dimensional 3D imaging techniques *Methods in Ancient Wine Archaeology* Emlyn Dodd,Dimitri Van Limbergen,2024-02-08 Bringing together a wide array of modern scientific techniques and interdisciplinary approaches this book provides an accessible guide to the methods that form the current bedrock of research into Roman and more broadly ancient wine Chapters are arranged into thematic sections covering biomolecular archaeology and chemical analysis archaeobotany and palynology vineyard and landscape archaeology and computational and experimental archaeology These include discussions of some of the most recent techniques such as ancient DNA and organic residue analyses geophysical prospection multispectral imaging and spatial and climatic modelling While most of the content is of direct relevance to the Roman Mediterranean the assortment of detailed case studies methodological outlines and broader state of the field reflections is of equal use to researchers working across disparate disciplines geographies and chronologies

The study of ancient Roman wine has been dominated until recently by traditional archaeological analyses focused upon production facilities and ceramic evidence related to transport. While such architecture and artefact focussed approaches provide a fundamental foundation for our understanding of this topic they fail to provide the requisite nuance to answer other questions regarding grape cultivation and wine production, consumption, use and trade. As the first compendium of its kind, this book supports the embedding of modern scientific and experimental techniques into archaeological fieldwork, research and laboratory analysis, pushing the boundaries of what questions can be explored and serving as a launching point for future avenues of interdisciplinary research.

### **Advances in Geophysical Methods Applied to Forensic Investigations**

Giovanni Leucci, 2020-05-07 This book provides a general introduction to the most important geophysical exploration methods and their application to forensic sciences. It describes physical principles, campaign procedures and processing as well as interpretation techniques while also highlighting new acquisition and data analysis procedures. A large section of the book is devoted to applications from measurements to the interpretation of data. Further, the book shows how to design and perform a forensic survey and offers guidance on selecting the best method for the problem at hand and on selecting the best type of data acquisition and processing. Written in straightforward language and chiefly intended as an introductory text for students in several scientific fields, the book also offers a useful guide for specialists who want to expand their expertise in this fascinating discipline.
