Food for thought? Experimental evidence on the learning impacts of a large-scale school feeding program in Ghana Aurino, Elisabetta,Gelli, Aulo,Adamba, Clement,Osei-Akoto, Isaac,Alderman, Harold,2018-12-20 There is very limited experimental evidence of the impact of large scale government led school meals programs on child educational achievements in Sub Saharan Africa We address this gap by reporting treatment effects from a nationwide randomized trial of the Government of Ghana s school feeding program GSFP on children s math and literacy cognition problem solving ability and working memory and composite scores of overall attainments Based on the government s plans to re target and scale up the GSFP food insecure schools and related communities across the country were randomly assigned to school feeding After two years of implementation program availability led to moderate increases in test scores for the average pupil in school catchment areas ranging between 0.12 and 0.16 standard deviations Analysis focusing on per protocol population subgroups unveiled substantial heterogeneity school feeding led to remarkable learning and cognitive gains for girls poorest children and children from the northern regions Program effects were at least twice as large as for the average child Increases in enrolment grade attainment and shifts in time use toward schooling time constituted potential mechanisms for impact We conclude the program combined social protection with equitable human capital accumulation thus contributing to the imperative of learning for all set in the Sustainable Development Goals

The Global Testing Culture William C. Smith,2016-01-04 The past thirty years have seen a rapid expansion of testing exposing students worldwide to tests that are now more than ever standardized and linked to high stakes outcomes The use of testing as a policy tool has been legitimized within international educational development to measure education quality in the vast majority of countries worldwide The embedded nature and normative power of high stakes standardized testing across national contexts can be

understood as a global testing culture The global testing culture permeates all aspects of education from financing to parental involvement to teacher and student beliefs and practices The reinforcing nature of the global testing culture leads to an environment where testing becomes synonymous with accountability which becomes synonymous with education quality Underlying the global testing culture is a set of values identified from the increasing literature on world culture These include education as a human right academic intelligence faith in science decentralization and neoliberalism Each of these values highlights different aspects of the dialogue in support of high stakes standardized testing The wide approval of these values and their ability to legitimate various aspects of high stakes testing reinforces the taken for granted notion that such tests are effective and appropriate education practices However a large body of literature emphasizes the negative unintended consequences teaching to the test reshaping the testing pool the inequitable distribution of school resources and teachers attention and reconstructing the role of the student teacher and parent commonly found when standardized census based tests are combined with high stakes outcomes for educators or students This book problematizes this culture by providing critical perspectives that challenge the assumptions of the culture and describe how the culture manifests in national contexts The volume makes it clear that testing per se is not the problem Instead it is how tests are administered used or misused and linked to accountability that provide the global testing culture with its powerful ability to shape schools and society and lead to its unintended undesirable consequences
