Kowalski, 2007-08-23 The growth of the Internet and the availability of enormous volumes of data in digital form have necessitated intense interest in techniques to assist the user in locating data of interest The Internet has over 350 million pages of data and is expected to reach over one billion pages by the year 2000 Buried on the Internet are both valuable nuggets to answer questions as well as a large quantity of information the average person does not care about The Digital Library effort is also progressing with the goal of migrating from the traditional book environment to a digital library environment The challenge to both authors of new publications that will reside on this information domain and developers of systems to locate information is to provide the information and capabilities to sort out the non relevant items from those desired by the consumer In effect as we proceed down this path it will be the computer that determines what we see versus the human being The days of going to a library and browsing the new book shelf are being replaced by electronic searching the Internet or the library catalogs Whatever the search engines return will constrain our knowledge of what information is available An understanding of Information Retrieval Systems puts this new environment into perspective for both the creator of documents and the consumer trying to locate information **Algorithms and Computation** Xiaotie Deng, Dingzhu

MICAI 2000: Advances in Artificial Intelligence Osvaldo Cairo, Enrique L. Sucar, Francisco J. Cantu, 2006-12-30 Fifty years ago A Turing predicted that by 2000 we would have a machine that could pass the Turing test Although this may not yet be true AI has advanced significantly in these 50 years and at the dawn of the XXI century is still an active and challenging field This year is also significant for AI in Mexico with the merging of the two major AI conferences into the biennial Mexican International Conference on Artificial Intelligence MICAI series MICAI is the union of the Mexican National AI Conference RNIA and the International AI Symposium ISAI organized annually by the Mexican Society for AI SMIA

since 1984 and by the Monterrey Institute of Technology ITESM since 1988 respectively The first Mexican International Conference on Artificial Intelligence MICA 2000 took place April 11-14, 2000 in the city of Acapulco, Mexico. This conference seeks to promote research in AI and cooperation among Mexican researchers and their peers worldwide. We welcome you all. Over 163 papers from 17 different countries were submitted for consideration to MICA 2000. After reviewing them thoroughly, MICA's program committee, referees, and program chair accepted 60 papers for the international track. This volume contains the written version of the papers and invited talks presented at MICA. We would like to acknowledge the support of the American Association for Artificial Intelligence AAAI and the International Joint Conference on Artificial Intelligence IJCAI. We are specially grateful for the warm hospitality and generosity offered by the Acapulco Institute of Technology.

Distributed Artificial Intelligence Satya Prakash Yadav, Dharmendra Prasad Mahato, Nguyen Thi Dieu Linh, 2020-12-17 Distributed Artificial Intelligence DAI came to existence as an approach for solving complex learning, planning, and decision-making problems. When we talk about decision-making, there may be some meta-heuristic methods where the problem-solving may resemble like operation research. But exactly, it is not related completely to management research. The text examines representing and using organizational knowledge in DAI systems, dynamics of computational ecosystems, and communication-free interactions among rational agents. This publication takes a look at conflict resolution strategies for nonhierarchical distributed agents, constraint-directed negotiation of resource allocations, and plans for multiple agents. Topics included: plan verification, generation, and execution; negotiation operators; representation; network management problem; and conflict resolution paradigms. The manuscript elaborates on negotiating task decomposition and allocation using partial global planning and mechanisms for assessing nonlocal impact of local decisions in distributed planning. The book will attract researchers and practitioners who are working in management and computer science and industry persons in need of a beginner to advanced understanding of the basic and advanced concepts.
