[Solving Business Problems with Informix TimeSeries](#) Vaibhav S Dantale, Tony Hays, Anup Nair, Jacques Roy, IBM Redbooks, 2012-09-21 The world is becoming more and more instrumented interconnected and intelligent in what IBM terms a smarter planet with more and more data being collected for analysis In trade magazines this trend is called big data As part of this trend the following types of time based information are collected Large data centers support a corporation or provide cloud services These data centers need to collect temperature humidity and other types of information over time to optimize energy usage Utility meters referred to as smart meters allow utility companies to collect information over a wireless network and to collect more data than ever before IBM Informix TimeSeries is optimized for the processing of time based data and can provide the following benefits Storage savings Storage can be optimized when you know the characteristics of your time based data Informix TimeSeries often uses one third of the storage space that is required by a standard relational database Query performance Informix TimeSeries takes into consideration the type of data to optimize its organization on disk and eliminates the need for some large indexes and additional sorting For these reasons and more some queries can

easily have an order of magnitude performance improvement compared to standard relational. Simpler queries Informix TimeSeries includes a large set of specialized functions that allow you to better express the processing that you want to execute. It even provides a toolkit so that you can add proprietary algorithms to the library. This IBM Redbooks publication is for people who want to implement a solution that revolves around time based data. It gives you the information that you need to get started and be productive with Informix TimeSeries.

Database Schema Evolution and Meta-Modeling Herman Balsters, Bert de Brock, Stefan Conrad, 2003-06-29 The Ninth International Workshop on Foundations of Models and Languages for Data and Objects FoMLaDO took place in Dagstuhl Germany September 18-21 2000. The topic of this workshop was Database schema Evolution and Meta Modeling. This FoMLaDO Workshop was hence assigned the acronym DEMM 2000. These post proceedings contain the revised versions of the accepted papers of the DEMM 2000 workshop. Twelve regular papers were accepted for inclusion in the proceedings. The papers address the following issues: Consistency of evolving concurrent information systems, Adaptive specifications of technical information systems, Change propagation in schema evolution of object based systems, Evolving software of a schema evolution system, Logical characterization of schema evolution, Conflict management in integrated databases, Evolving relation schemas, Conceptual descriptions of adaptive information systems, OQL extensions for metadata access, Metamodeling of schema evolution, Metrics for conceptual schema evolution, Incremental datawarehouse construction. In addition to the regular papers there is an invited paper by Can Turker on schema evolution in SQL99 and object relational databases. Acknowledgements We wish to thank the program committee members for their work on reviewing the submitted papers. We also wish to thank all authors for submitting papers to this workshop. Moreover all participants of the workshop are thanked for contributing to lively discussions. Thanks also to Elke Rundensteiner who delivered an invited talk on the SERF project concerning executable database transformations.

Active Database Systems Jennifer Widom, Stefano Ceri, 1995-09 Active database systems enhance traditional database functionality with powerful rule processing capabilities providing a uniform and efficient mechanism for many database system applications. Among these applications are integrity constraints, views, authorization, statistics gathering, monitoring and alerting, knowledge based systems, expert systems and workflow management. This significant collection focuses on the most prominent research projects in active database systems. The project leaders for each prototype system provide detailed discussions of their projects and the relevance of their results to the future of active database systems. Features: A broad overview of current active database systems and how they can be extended and improved. A comprehensive introduction to the core topics of the

field including its motivation and history Coverage of active database trigger capabilities in commercial products Discussion of forthcoming standards
