Life-Cycle of Engineering Systems: Emphasis on Sustainable Civil Infrastructure Jaap Bakker, Dan M. Frangopol, Klaas Breugel, 2016-11-18 This volume contains the papers presented at IALCCE2016 the fifth International Symposium on Life Cycle Civil Engineering IALCCE2016 to be held in Delft The Netherlands October 16 19 2016 It consists of a book of extended abstracts and a DVD with full papers including the Fazlur R Khan lecture keynote lectures and technical papers from all over the world All major aspects of life cycle engineering are addressed with special focus on structural damage processes life cycle design inspection monitoring assessment maintenance and rehabilitation life cycle cost of structures and infrastructures life cycle performance of special structures and life cycle oriented computational tools The aim of the editors is to provide a valuable source for anyone interested in life cycle of civil infrastructure systems including students researchers and practitioners from all areas of engineering and industry

Planning, Housing and Infrastructure for Smart Villages Hemanta Doloi, Ray Green, Sally Donovan, 2018-12-07 Some 7.3 billion people currently live on the planet Of these 3.4 billion live in rural areas In just a few regions Latin America the Middle East and North Africa less than 50 per cent of poverty is now located in rural areas But for the rest of the world's regions between 55 per cent and 80 per cent of the poor continue to live in the countryside Progress is being made but much of the knowhow needed is not disseminated outside of a small coterie of professionals who work in the area With urban development attracting a great deal of attention lately poorer rural areas deserve the same and new knowledge for empowerment of rural communities is urgently needed This book provides an overview of current thinking and practices that have emerged over the last thirty years for uplifting rural communities in developing economies Drawing on a body of knowledge across a spectrum of relevant disciplines this book provides a range of innovative ideas for rural planning housing and infrastructure development Governments in many emerging economies where rural poverty is often most acute have attempted to improve livelihoods Approaches and techniques that have been used for urban development are often not applicable to rural communities Studies show that money allocated for rural development is often not effectively spent due to distance lack of infrastructure lack of education poverty and other factors Meanwhile the gap in development between the city and country continues to grow sometimes leading to social and political instability in both developing and developed countries This book seeks to provide a guidebook for meeting such challenges Through in depth enquiry of global practices and thinking about rural development and selected case studies the authors argue that careful consideration must be given to incorporating issues of resilience resourcefulness and the involvement of communities at grassroots levels in realising the transformation of rural settlements into Smart Villages

Modeling the Underground Infrastructure of Urban Environments Nataliya Pankratova, Hennadii Haiko, Illia Savchenko, 2024-01-03 The book considers the underground development of cities from a systemic point of view The authors scientific methodology for planning a system of alternative design configurations in a metropolis including underground

infrastructure on the basis of applied system analysis methods is revealed The book presents a short guide and a number of practical applications of morphological analysis cognitive modeling and other system analysis methods as tools for solving various urban problems including risk assessment in the transport infrastructure of a city evaluation and justification of constructing different types of underground objects on a selected site according to its structural functional and geological factors construction of scenarios aimed at informed decision making in planning complex underground facilities The book provides novel and convenient tools for urban development to professionals in urban planning municipal authorities and investors and researchers in urban studies Advances in Human Factors in Architecture, Sustainable Urban Planning and Infrastructure Jerzy Charytonowicz, Christianne Falcão, 2019-06-03

This book discusses human factors research directed towards realizing and assessing sustainability in the built environment and architecture It reports on advanced engineering methods for sustainable infrastructure design architecture as well as on assessments of the efficient methods and the social environmental and economic impact of various designs and projects The book covers a range of topics including the use of recycled materials in architecture ergonomics in buildings and public design sustainable design for smart cities design for the aging population industrial design human scale in architecture and many more Based on the AHFE 2019 International Conference on Human Factors in Architecture Sustainable Urban Planning and Infrastructure held on July 24 28 2019 in Washington D C USA it offers various perspectives on sustainability and ergonomics As such it is a valuable reference resource for designers urban engineers architects infrastructure professionals public infrastructure owners policy makers government engineers and planners as well as operations managers and academics active in urban and infrastructure research *Africa's Infrastructure* World Bank, 2009-12-01 Sustainable infrastructure development is vital for Africa's prosperity And now is the time to begin the transformation This volume is the culmination of an unprecedented effort to document analyze and interpret the full extent of the challenge in developing Sub Saharan Africa's infrastructure sectors As a result it represents the most comprehensive reference currently available on infrastructure in the region The book covers the five main economic infrastructure sectors information and communication technology irrigation power transport and water and sanitation Africa's Infrastructure A Time for Transformation reflects the collaboration of a wide array of African regional institutions and development partners under the auspices of the Infrastructure Consortium for Africa It presents the findings of the Africa Infrastructure Country Diagnostic AICD a project launched following a commitment in 2005 by the international community after the G8 summit at Gleneagles Scotland to scale up financial support for infrastructure development in Africa The lack of reliable information in this area made it difficult to evaluate the success of past interventions prioritize current allocations and provide benchmarks for measuring future progress hence the need for the AICD Africa's infrastructure sectors lag well behind those of the rest of the world and the gap is widening Some of the main policy relevant findings highlighted in the book include the following infrastructure in the region is exceptionally expensive

with tariffs being many times higher than those found elsewhere Inadequate and expensive infrastructure is retarding growth by 2 percentage points each year Solving the problem will cost over US 90 billion per year which is more than twice what is being spent in Africa today However money alone is not the answer Prudent policies wise management and sound maintenance can improve efficiency thereby stretching the infrastructure dollar There is the potential to recover an additional US 17 billion a year from within the existing infrastructure resource envelope simply by improving efficiency For example improved revenue collection and utility management could generate US 3.3 billion per year Regional power trade could reduce annual costs by US 2 billion And deregulating the trucking industry could reduce freight costs by one half So raising more funds without also tackling inefficiencies would be like pouring water into a leaking bucket Finally the power sector and fragile states represent particular challenges Even if every efficiency in every infrastructure sector could be captured a substantial funding gap of 31 billion a year would remain Nevertheless the African people and economies cannot wait any longer Now is the time to begin the transformation to sustainable development

goods more efficiently The authors examine how existing modes of transport can be made more effective by the use of modern communications technology Examples include RFID tags which allow goods to be tracked electronically at every stage of their journey from the point of manufacture to the point of delivery They show how possible future developments will continue to revolutionize transport systems leading to better cleaner more cost effective systems For example the concept of computer controlled rail systems such as London s Dockland Light Railway could be taken a stage further to apply to vehicles which don t run on rails or the smart traffic control system in Milton Keynes which sense traffic flow and adjusts signal phasing accordingly

Designing Publics Christopher A. Le Dantec, 2016-09-09 An exploration of design considerations in the design of technologies that support local collective action Contemporary computing technologies have thoroughly embedded themselves in every aspect of modern life conducting commerce maintaining and extending our networks of friends and mobilizing political movements all occur through a growing collection of devices and services designed to keep and hold our attention Yet what happens when our attention needs to be more local collective and focused on our immediate communities Perhaps more important how can we imagine and create new technologies with local communities In *Designing Publics* Christopher Le Dantec explores these questions by designing technologies with the urban homeless Drawing on a case study of the design of a computational infrastructure in a shelter for homeless women and their children Le Dantec theorizes an alternate vision of design in community contexts Focusing on collective action through design Le Dantec investigates the way design can draw people together on social issues and create and sustain a public By designing publics he refers both to the way publics arise out of design intervention and to the generative action publics take how they do design as they mobilize and act in the world This double lens offers a new view of how design and a diverse set of design practices circulate in sites of collective action rather than commercial production
