Engineering Mechanics--7th Conference American Society of Civil Engineers. Engineering Mechanics Division. Specialty Conference,1988 *Structural Dynamic Analysis with Generalized Damping Models* Sondipon Adhikari,2013-12-11 Since Lord Rayleigh introduced the idea of viscous damping in his classic work The Theory of Sound in 1877 it has become standard practice to use this approach in dynamics covering a wide range of applications from aerospace to civil engineering However in the majority of practical cases this approach is adopted more for mathematical convenience than for modeling the physics of vibration damping Over the past decade extensive research has been undertaken on more general non viscous damping models and vibration of non viscously damped systems This book along with a related book Structural Dynamic Analysis with Generalized Damping Models Identification is the first comprehensive study to cover vibration problems with general non viscous damping The author draws on his considerable research experience to produce a text covering dynamics of viscously damped systems non viscously damped single and multi degree of freedom systems linear systems with non local and non viscous damping reduced computational methods for damped systems and finally a method for dealing with general asymmetric systems The book is written from a vibration theory standpoint with numerous worked examples which are relevant across a wide range of mechanical aerospace and structural engineering applications

Simulation of Thermoelastic Behaviour of Spacecraft Structures Simon Appel,Jaap Wijker,2021-08-31 This book provides recommendations for thermal and structural modelling of spacecraft structures for predicting thermoelastic responses It touches upon the related aspects of the finite element and thermal lumped parameter method A mix of theoretical and practical examples supports the modelling guidelines Starting from the system needs of instruments of spacecraft the reader is supported with the development of the practical requirements for the joint development of the thermal and structural models It provides points of attention and suggestions to check the quality of the

models The temperature mapping problem typical for spacecraft thermoelastic analysis is addressed The principles of various temperature mapping methods are presented The prescribed average temperature method co developed by the authors is discussed in detail together with its spin off to provide high quality conductors for thermal models The book concludes with the discussion of the application of uncertainty assessment methods The thermoelastic analysis chain is computationally expensive Therefore the 2k 1 point estimate method of Rosenblueth is presented as an alternative for the Monte Carlo Simulation method bringing stochastic uncertainty analysis in reach for large thermoelastic problems
